Outside Is the Ocean traces Heike's struggle to find love and happiness in America. After two marriages and a troubled relationship with her son, Heike adopts a disabled child from Russia, a strong-willed girl named Galina, who Heike hopes will give her the affection and companionship she craves. As Galina grows up, Heike's grasp on reality frays, and she writes a series of letters to the son she thinks has abandoned her forever. It isn't until Heike's death that her son finds these letters and realizes how skewed his mother's perceptions actually were.

One of the most powerful, yet relatively unknown features available in HEC-RAS is the HECRASController. TheHECRASController API has a wealth of procedures which allow a programmer to manipulate HEC-RAS externally by setting input data, retrieving input or output data, and performing common functions such as opening and closing HEC-RAS, changing plans, running HEC-RAS, and plotting output. HECRASController applications are seemingly endless. Not only can the retrieval and post-processing of output be automated, but with the HECRASController, real-time modeling and probabilistic experiments like Monte Carlo are possible. If you have HEC-RAS on your computer, you already have the HECRASController! "Breaking the HEC-RAS Code" explains how the HECRASController works, provides example applications of the HECRASController, and catalogs the vast array of programming procedures (with explanations and examples on how to use them) embedded in the HECRASController. This is a "must-have" book for all HEC-RAS users. Professionals: Give yourself an edge for the next proposal and do something groundbreaking with HEC-RAS. Students: Make yourself marketable by adding the skills offered in this book.
