One of the world's foremost parenting experts offers a revolutionary guide for translating a crying baby's urgent messages. Like many new parents, Priscilla Dunstan was at her wit's end trying to ease the crying of her colicky infant son. Then she made a startling discovery: His sounds varied according to his needs, and she could decipher their meaning by tracking the sound as a physical reflex. Unlike learned languages, Dunstan soon realized, every newborn from birth to three months possesses a natural, reflexive communication system for signaling hunger, tiredness, the need to burp, lower gas, and general discomfort. Thirteen years of research culminated in the *Dunstan Baby Language*, now made available to all caregivers in *Calm the Crying*. Helping readers learn to recognize and respond to exactly what their baby needs, Dunstan's remarkable program covers ten sounds in total that can be identified and used to calm a baby. Brimming with diagrams and photographs, *Calm the Crying* reduces the frustration of wasted time spent addressing the wrong needs. A baby's cries are a powerful form of communication—now made even more powerful because the message can be understood loud and clear.
