This book leads readers through an intriguing examination how books began and have evolved through history, and explores where future technologies may lead them. From ancient clay tablet and scrolls to medieval manuscripts and printed books to personal computers and iPads, this guide examines the fascinating history of books from 4000 BCE to the present. At each step of this evolution, technologies are examined and evaluated to show how these ideas are present from the very beginning of written communication. Moving chronologically from the ancient world to the present, the book shows how written communication media evolved from cuneiform to the Kindle. Focusing on key technologies and vital periods of historical transition, it traces an evolution that elucidates the history of the written word, at each step examining and evaluating such aspects of technologies as memory capacity, readability and writability, durability, recyclability, information security, ease and mode of access, and cost. Additional attention is paid to how these technologies were made, how they were circulated, and who was reading them. Provides faculty and students with a brief but fascinating and engagingly written textbook Includes hands-on activities and course assignments that encourage student learning Features interesting factoids and illustrations, making this book useful as a text, as a professional guide, or for pleasure reading

A history of the cult of the ancient Druids, exploring who they really were and what role they played in the Celtic world. The author's interpretation of the facts is based on both archaeological and etymological findings. Peter Berresford Ellis sifts through evidence and, with reference to the latest archaeological findings and the use of etymology, shows that the Druids have been subject to a swaythe of propaganda and myth-making through the centuries.

What will planet Earth be like in twenty years? At mid-century? In the year 2100? Prescient and convincing, this book is a must-read for anyone concerned about the future. Never has the world offered more promise for the future and been more fraught with dangers. Attali anticipates an unraveling of American hegemony as transnational corporations sever the ties linking free enterprise to democracy. World tensions will be primed for horrific warfare for resources and dominance. The ultimate question is: Will we leave our children and grandchildren a world that is not only viable but better, or in this nuclear world bequeath to them a planet that will be a living hell? Either way, he warns, the time to act is now.

A narrative history of paradoxes explores how the greatest minds in humanity have addressed challenging problems, in a chronologically organized volume that considers perspectives on the chicken and the egg riddle and more. (Philosophy)

From Kevin Brockmeier, one of this generation's most inventive young writers, comes a striking new novel about death, life, and the mysterious place in between. The City is inhabited by those who have departed Earth but are still remembered by the living. They will reside in this afterlife until they are completely forgotten. But the City is shrinking, and the residents clearing out. Some of the holdouts, like Luka Sims, who produces the City's only newspaper, are wondering what exactly is going on. Others, like Coleman Kinzler, believe it is the beginning of the end. Meanwhile, Laura Byrd is trapped in an Antarctic research station, her supplies are running low, her radio finds only static, and the power is failing. With little choice, Laura sets out across the ice to look for help, but time is running out. Kevin Brockmeier alternates these two storylines to create a lyrical and haunting story about love, loss and the power of memory.

At the turn of the 19th century, the Ottoman Empire straddled three continents and encompassed extraordinary ethnic and cultural diversity among the millions of people living within its borders. This text provides a concise history of the late empire between 1789 and 1918, turbulent years marked by incredible social change.

In an introduction to the world of cognitive science, a neurobiologist traces the evolution of the mind, from apes, Neanderthals, and human ancestors to a burst of creativity that began about fifty thousand years ago, suggesting that the mind will continue to evolve, with enhanced reasoning abilities, ethics, and other changes.

In this biography of history as a living idea, Colin Wells links together lively, evocative sketches of the great historians and summarizing their most important works. Readers learn how their ideas changed the understanding of history, how history itself moved forward over time, and why "history" is a startlingly fluid concept.

The epic story of the scientists through the ages who have sought answers to life’s biggest mystery: How did it begin? In this essential and illuminating history of Western science, Bill Mesler and H. James Cleaves II seek to answer the most crucial question in science: How did life begin? They trace the trials and triumphs of the iconoclastic scientists who have sought to solve the mystery, from Darwin’s theory of evolution to Crick and Watson’s unveiling of DNA. This fascinating exploration not only examines the origin-of-life question, but also interrogates the very nature of scientific discovery and objectivity.
