Sweden spared European surge as coronavirus infections ...

This is the first time oceans are explicitly highlighted as a focus area. The forthcoming strategy will enable the Swedish International Development Cooperation Agency (Sida) to support global action for Sustainable Oceans, including support to normative processes and institutional capacity building, during the period 2018-2022.

As CEOs and business leaders navigate a world of complex global challenges, sustainability is no longer optional but a business imperative. In this book, two sustainability leaders with decades of experience – Henrik Henriksson, CEO of Scania and Elaine Weidman Grunewald, Co-founder of the AI Sustainability Center, and former Chief Sustainability & Public Affairs Officer at Ericsson – offer a simple but powerful three-step model for leading an organization on a sustainability transformation journey that aims at big, audacious, world-changing goals. Honest about the dilemmas but bullish on the opportunities, the authors advise leaders on how to accelerate sustainability in their organizations told through a Swedish lens, where the country's values and culture permeate the boardroom and the C-suite, bringing a unique clarity and conviction to leading with integrity. In practical insights gleaned from the authors' own experience, the book takes leaders through the three phases of sustainability leadership: from establishing a solid foundation rooted in purpose, culture, values, principles and consistent, credible leadership, to integrating sustainability into the core business, and then to executing a vision that not only shifts the direction of the company but can change an entire industry, and even the world. Throughout the book, more than 25 interviews with other leading CEOs of Swedish companies as well as successful start-ups, investors, economists, and other experts illuminate the path to sustainability leadership from different perspectives. These are complemented by case studies describing how companies got it right – or turned themselves around after getting it very, very wrong. With this hands-on insiders' guide, CEOs and C-suite leaders can take sustainability to the next level. This is the encouragement and inspiration business leaders need to move past incremental improvement at a time when exponential, world-changing action is more urgent than ever.

The 2030 Agenda, adopted by the UN General Assembly in September 2015, outlines an ambitious and universal plan of action for people, planet and prosperity as it seeks to strengthen universal peace and freedom. This report presents national and Nordic action on Agenda 2030 with the aim to inform and support the Nordic Council of Ministers in formulating a new Nordic Sustainable Development Programme. All Nordic countries are engaged and strongly committed to implementing Agenda 2030 and there is a broad societal interest in joint Nordic action. The existing Nordic Strategy for Sustainable Development and several other key initiatives within Nordic cooperation already contribute to the goals of Agenda 2030. A new Nordic Sustainable Development Programme can build upon a strong foundation and add further value to the national and international work done by the Nordic countries.

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. Sweden is seen as a forerunner in environmental and ecological policy. Sweden and ecological governance is about policies and strategies for ecologically rational governance, and uses the Swedish case study to ask whether or not it is possible to move from a traditional environmental policy to a broad, integrated pursuit of sustainable development, as illustrated through the 'Sustainable Sweden' programme. The study begins by looking at the spatial dimensions of ecological governance, and goes on to consider the integration and effectiveness of sustainable development policies. It analyses the tension between democracy and sustainable development, which has a broader relevance beyond the Swedish model, to other nation states as well as the European Union as a whole. In this book the author offers the latest word in advanced implementation of sustainable development by a front-runner in environmental and ecological policy. It will be useful for students of environmental politics and sustainable development researchers.

In the following Government Bill, the Swedish Government presents its strategy for forthcoming work on realising the goal of sustainable development in Sweden, together with a strategy for Swedish work in conjunction with global cooperation aimed at achieving sustainable development. These strategies are based on the principles laid down at the conference, in the Rio Declaration and in the Agenda 21 action Programme.

. . . offering an enjoyable read in comparative politics and policy, it offers a point of reference for understanding the conceptual and empirical possibilities for further research in EPI. Darren McCauley, West European Politics . . . a bank of internationally based case studies written by leading environmental experts. The Environmentalist The organisation of th[is] book is exemplary, particularly for an edited volume. . . [A]n impressive intellectual contribution to the understanding of EPI. . . I strongly recommend it to scholars and students. . . and, crucially, also to politicians and civil servants who have attempted (or half-attempted) the task of remedying the historical neglect of environmental issues. Ian Bailey, Environment and Planning C Good social science may not raise our spirits, but it should improve our policy understanding. Andrew Jordan and Andrea Lenschow have produced a volume that provides a subtle and empirically informed understanding of environmental policy integration, using a design that looks both at the full policy cycle and at cross-national comparisons. From the foreword by Albert Weale FBA, University of Essex, UK Policy coordination is normally studied in hierarchical and institutional terms. This volume demonstrates the power of an idea to function as a framework for coordination. It offers an innovative study of policy coordination, as well as a thorough study of environmental policy. Guy Peters, University of Pittsburgh, US This book deals with a critical challenge facing modern governments: how to integrate environmental thinking into all policy areas. It provides fascinating insights into the progress made in realizing this objective and is a must read for anyone interested in understanding how far we have come, and how far we still have to go, in greening government for sustainable development. James Meadowcroft, Carleton University, Canada This collection brings together leading scholars in the field to explore the origins and applications of different instruments of environmental policy integration from a comparative perspective. This book is a must read for environmental policy practitioners and scholars with an interest in how environmental outcomes can and are being improved. Miranda A. Schreurs, Freie Universität Berlin, Germany Environmental Policy Integration (EPI) is an innovative policy principle designed to deliver sustainable development. This book offers an unrivalled exploration of its conceptualization and implementation, drawing upon a set of interlinked case studies of the most common implementing instruments and the varied experience of applying them in six OECD states and the EU. Written by a team of international experts, it identifies and explains broad patterns and dynamics in what is an important area of contemporary environmental policy analysis. This insightful account of the state-of-the-art aims to offer a valuable resource for academics interested in environmental politics and policy analysis, as well as the broader, interdisciplinary theme of governance for sustainable development . It will interest advanced undergraduate and postgraduate students taking courses in comparative politics, public administration and environmental politics and policy-making. Given the continuing political relevance of sustainability, it should also appeal to NGOs, think tanks and international bodies attempting to coordinate policies across and within different levels of governance.
