VH and the anti/pro continuum. To a certain extent, keeping VH on the anti/pro continuum is convenient, as VH can be conceived as a temporary attitude of individuals who have not yet chosen between the anti- and pro- attitudes and who can more easily be convinced to endorse the latter than strong opponents 30. One might then hope to help people to move along this continuum through interventions designed to bring them what they lack: self-efficacy, knowledge or trust of the authorities.

Antiracism is a global and historical social movement of resistance and solidarity, yet there have been relatively few books focusing on it as a subject in its own right. After his earlier books on racist discourse, Teun A. van Dijk provides a theory of antiracism along with a history of discourse against slavery, racism and antisemitism. He first develops a multidisciplinary theory of antiracism, highlighting especially the role of discourse and cognition as forms of resistance and solidarity. He then covers the history of antiracist discourse, including antislavery and abolition discourse between the 16th and 19th century, antiracist discourse by white and black authors until the Civil Rights Movement and Black Lives Matter, and Jewish critical analysis of antisemitic ideas and discourse since the early 19th century. It is essential reading for anyone interested in how racism and antisemitism have been critically analysed and resisted in antislavery and antiracist discourse.

Drawing on social justice methodologies and cultural studies scholarship, Key Theoretical Frameworks offers new curricular and pedagogical approaches to teaching technical communication. Including original essays by emerging and established scholars, the volume educates students, teachers, and practitioners on identifying and assessing issues of social justice and globalization. The collection provides a valuable resource for teachers new to translating social justice theories to the classroom by presenting concrete examples related to technical communication. Each contribution adopts a particular theoretical approach, explains the theory, situates it within disciplinary scholarship, contextualizes the approach from the author's experience, and offers additional teaching applications. The first volume of its kind, Key Theoretical Frameworks links the theoretical with the pedagogical in order to articulate, use, and assess social justice frameworks for designing and teaching courses in technical communication. Contributors: Godwin Y. Agboka, Matthew Cox, Marcos Del Hierro, Jessica Edwards, Erin A. Frost, Elise Verzosa Hurley, Natasha N. Jones, Cruz Medina, Marie E. Moeller, Kristen R. Bowers argues that, when correctly interpreted and applied, the Constitution and the theory of liberty on which it is based require government to reject the conventional pro-choice and anti-abortion perspectives as too extreme and incomplete. Instead, this book sets forth a position that government is constitutionally obligated to approach abortion policy from a middle perspective. Relying on a jurisprudence of original theory, Pro-Choice and Anti-Abortion forcefully asserts that government is constitutionally constrained to formulate abortion policy that is at once pro-choice and anti-abortion. In so arguing, this book walks readers through this constitutionally mandated middle position by introducing them to the liberal teachings of John Locke that were so influential to the framers of the Constitution and by applying this political theory to the major issues of the abortion controversy--including the individual liberty interest in the abortion decision, minors and abortions, the liberty interest of the fetal-being, and the Freedom of Choice Act.

The undergraduate years are a special time of life for many students. They are a time for study, yes, but also a time for making independent decisions over what to do beyond formal education. This book is based on a nine-year study of collegiate a cappella - a socio-musical practice that has exploded on college campuses since the 1990s. A defining feature of collegiate a cappella is that it is a student-run leisure activity undertaken by undergraduate students at institutions both large and small, prestigious and lower-status. With rare exceptions, participants are not music majors yet many participants interviewed had previous musical experience both in and out of school settings. Motivations for staying musically involved varied considerably - from those who felt they could not imagine life without a musical outlet to those who joined on a whim. Collegiate a cappella is about much more than singing cover songs. It sustains multiple forms of inequality through its audition practices and its performative enactment of gender and heteronormativity. This book sheds light on how undergraduates conceptualize vocation and avocation within the context of formal education, holding implications for educators at all levels.

This is a comprehensive introduction to the main frameworks for thinking about, conducting research on, and teaching about race and racism in education. Renowned theoretician and philosopher Zeus Leonardo surveys the dominant race theories and, more specifically, focuses on those frameworks that are considered essential to cultivating a critical attitude toward race and racism. The book examines four frameworks: Critical Race Theory (CRT), Marxism, Whiteness Studies, and Cultural Studies. A critique follows each framework in order to analyze its strengths and set its limits. The last chapter offers a theory of "race ambivalence," which combines aspects of all four theories into one framework. Engaging and cutting edge, Race Frameworks is a foundational text suitable for courses in education and critical race studies.

Moral values are real-we don't just make them up. Beauty is in the world-it's not just in the eye of the beholder. You are free-what you do is not always determined by electrochemical processes in your brain. And the universe we live in is God's creation. These are radical claims. But they are widely rejected in contemporary philosophy because they are almost always considered in relative isolation from one another. This book shows that when they are considered in conjunction, they gain mutual support. And it shows this both clearly and concisely. But its systematic approach to philosophy also reveals that various philosophical positions currently widely accepted and defended can appear plausible and perhaps even compelling only when they are considered in relative isolation-as they, too, almost always are. When the issues on which these positions are taken are considered in conjunction, problems come into view and the alternative positions defended in this book emerge as superior. Toward a Philosophical Theory of Everything is a ground-breaking work that shows the importance of systematic thinking, while also defending positions, on central philosophical issues, that are widely rejected in contemporary philosophy.

This book provides tools and theoretical frameworks to make sense of how the world is regulated, governed, controlled with regard to the exclusivity of certain members of the society, and in particular, women from marginalized groups. This book, therefore, engages readers by asking thought-provoking questions to interrogate issues of marginality and oppression in society. The book, as a collective, provides an intellectual discourse on feminism, anticolonial thought and anti-racism. This book is a must read for scholars, activists, theorists and researchers who are seeking to rupture the borders of confinement and move beyond the imaginary margins created by organized structures in society.

This thought-provoking Handbook provides a theoretical overview of the wide variety of anti-environmentalisms and offers an integrative research agenda for future research on the topic. Probing the ways in which groups have organized to oppose environmental movements and pro-environmental policies in recent decades, it examines those involved in these countermovements and studies their motivations and support systems. This Handbook explores core topics in the field, including contestation over climate change, wind power, mining, forestry, food sovereignty, oil and gas pipelines and population issues.
