This book, part of the European Society of Intensive Care Medicine textbook series, teaches readers how to use hemodynamic monitoring, an essential skill for today's intensivists. It offers a valuable guide for beginners, as well as for experienced intensivists who want to hone their skills, helping both groups detect an inadequacy of perfusion and make the right choices to achieve the main goal of hemodynamic monitoring in the critically ill, i.e., to correctly assess the cardiovascular system and its response to tissue oxygen demands. The book is divided into distinguished sections: from physiology to pathophysiology; clinical assessment and measurements; and clinical practice achievements including techniques, the basic goals in clinical practice as well as the more appropriate hemodynamic therapy to be applied in different conditions. All chapters use a learning-oriented style, with practical examples, key points and take home messages, helping readers quickly absorb the content and, at the same time, apply what they have learned in the clinical setting. The European Society of Intensive Care Medicine has developed the Lessons from the ICU series with the vision of providing focused and state-of-the-art overviews of central topics in Intensive Care and optimal resources for clinicians working in Intensive Care.

Suffering is an unavoidable reality in health care. Not only are patients and families suffering but also the clinicians who care for them. Commonly the suffering experienced by clinicians is moral in nature, in part a reflection of the increasing complexity of health care, their roles within it, and the expanding range of available interventions. Moral suffering is the anguish that occurs when the burdens of treatment appear to outweigh the benefits; scarce human and material resources must be allocated; informed consent is incomplete or inadequate; or there are disagreements about goals of treatment among patients, families or clinicians. Each is a source of moral adversity that challenges clinicians' integrity: the inner harmony that arises when their essential values and commitments are aligned with their choices and actions. If moral suffering is unrelieved it can lead to disengagement, burnout, and undermine the quality of clinical care. The most studied response to moral adversity is moral distress. The sources and sequelae of moral distress, one type of moral suffering, have been documented among clinicians across specialties. It is vital to shift the focus to solutions and to expanded individual and system strategies that mitigate the detrimental effects of moral suffering. Moral resilience, the capacity of an individual to restore or sustain integrity in response to moral adversity, offers a path forward. It encompasses capacities aimed at developing self-regulation and self-awareness, buoyancy, moral efficacy, self-stewardship and ultimately personal and relational integrity. Clinicians and healthcare organizations must work together to transform moral suffering by cultivating the individual capacities for moral resilience and designing a new architecture to support ethical practice. Used worldwide for scalable and sustainable change, the Conscious Full Spectrum approach, offers a method to solve problems to support integrity, shift patterns that undermine moral resilience and ethical practice, and source the inner potential of clinicians and leaders to produce meaningful and sustainable results that benefit all.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

"What a marvelous and amazing textbook. Drs. Marini, Glover-Graf and Millington have done a remarkable job in the design of this highly unique book, that comprehensively and very thoughtfully addresses the psychosocial aspects of the disability experience. These highly respected scholars have produced a major work that will be a central text in rehabilitation education for years to come." From the Foreword by Michael J. Leahy, Ph.D., LPC, CRC Office of Rehabilitation and Disability Studies Michigan State University "This is an excellent book, but the best parts are the stories of the disabled, which give readers insights into their struggles and triumphs." Using a minority model perspective to address disability, the book focuses on historical perspectives, cultural variants regarding disability, myths and misconceptions, the attitudes of special interest and occupational groups, the psychology of disability with a focus on positive psychology, and adjustments to disability by the individual and family. A wealth of counseling guidelines and useful strategies are geared specifically to individual disabilities. Key Features: Contains narratives of people living with blindness, hearing impairments, spinal cord injuries, muscular dystrophy, polio, mental illness, and other disabilities Provides counseling guidelines and strategies specifically geared toward specific disabilities, including "dos and don'ts" Includes psychological and sociological research relating to individual disabilities Discusses ongoing treatment issues and ethical dilemmas for rehabilitation counselors Presents thought-provoking discussion questions in each chapter Authored by prominent professor and researcher who became disabled as a young adult
