Let m be the ideal consisting of all nonunits. Since $0 \in m$, 0 is a nonunit, so $1 \notin m$, and it follows that the ideal m is proper. Now, if b is any proper ideal of A then all elements of b are

nonunits, so $b \in m$. Thus all proper ideals are contained in m , so m is the unique maximal ideal of A .

Commutative algebra has grown in many directions. Over a period of nearly fifty years starting from the so-called homological period till today, the area has developed into a rich laboratory of methods, structures and problem-solving tools. One could say a distinct modern trend of commutative algebra
