Battleships - WWII Evolution of the Big Guns is the latest insult from Pen and Sword Publishing in their "Images of War" series. I find it interesting that Philip Kaplan, a fairly decent military historian is peddling this crap. There are two other titles by Kaplan also covering battleships and only the one entitled Battleships - The First Big ...

Beginning with a pictorial essay on battleship construction in the 1930s and 1940s, this new book looks at the various design facets of the last great capital ships of the world's navies.

Kaplan offers us a glimpse into those massive American and German navy yards and construction facilities that were put to use during this time, acquainting us with the arenas in which these final examples of battleship technology were laid down, built up, launched, fitted out, commissioned and taken out to sea. The book roots itself in a period of monumental change within the history of contemporary warfare. With the baton being passed from the battleship community to that of the aircraft carrier, the iconic battleship was gradually superseded by a new and even more threatening weapons system. It was destined to be consigned to the history books, whilst newer, slicker and more efficient fighting machines took precedence. This publication serves as a tribute to a lost legend of naval warfare. There is a look at some of modern history's most significant battleships, relaying their thrilling stories, defining characteristics and eventual fates. Ships featured include Scharnhorst, Gneisenau, Warspite, Tirpitz and Yamato. The book is completed with 'Fast and Last', a visit on board the four final examples of battleship technology and design, the last serving battleships USS Iowa, USS New Jersey, USS Wisconsin, and USS Missouri. Their Second World War careers are recounted, as are the qualities that made them special.

This volume presents an illustrated overview of the major battleships of World War II. It includes armament and armour, full technical specifications where known, date of construction, service and engagement record and ultimate fate.

Beginning with a pictorial essay on battleship construction in the 1930s and 1940s, this new book looks at the various design facets of the last great capital ships of the world's navies.

recounted, as are the qualities that made them special.

This lavishly-illustrated volume, first published in 1976 and back by popular demand, presents the full story of the design and construction of every British battleship and battlecruiser class that served in World War II--from the Queen Elizabeth class to the Vanguard. Noted authors Alan Raven and John Roberts include a comprehensive review of each ship's initial configuration and refits as well as developments in weapons, gunnery, fire control, radar, protection, and propulsion. There are also sections devoted to combat actions involving British battleships and comparisons with battleships of other navies. Six hundred photographs and illustrations, including sixteen fold-out pages, complement the authoritative history of the vessels. For other books in the battleship series, see page 26.

From the moment when the launching of HMS Dreadnought made every capital ship in the world obsolete overnight, we have been fascinated with these powerful surface combatants. Here Robert M. Farley looks at the history and folklore that makes these ships enduring symbols of national power—and sometimes national futility. From Arizona to Yamato, here are more than sixty lavishly illustrated accounts of battleships from the most well-known to the most unusual, including at least one ship from every nation that ever owned a modern battleship. Separate essays and sidebars look at events and lore that greatly affected battleships.

The classic reference on the Royal Navy's battleships and battlecruisers, now expanded with

Read Online Battleships Wwii Evolution Of The Big Guns Rare Photographs From Wartime Archives Images Of War

dozens of additional photos. Offering an unprecedented range of descriptive and illustrative detail, this naval history reference describes the evolution of the British battleship classes through all their modifications and refits. As well as dealing with design features, armor, machinery and power plants and weaponry, the author examines the performance of the ships in battle and analyzes their successes and failures. In addition to covering all the Royal Navy's battleships and battlecruisers, he also looks in detail at the aircraft carrier conversions of the WWI battlecruisers Furious, Glorious and Courageous. *British Battleships 1919-1945* is a masterpiece of research, and the comprehensive text is accompanied by tabular detail and the finest collection of photographs and line drawings ever offered in such a book. For this new edition, the author has added some 75 new photographs, many of them never before published. A delight for the historian, enthusiast, and ship modeler, it is a volume that is already regarded as an essential reference work for this most significant era in naval history and ship design.

Warship Builders is the first scholarly study of the U.S. naval shipbuilding industry from the early 1920s to the end of World War II, when American shipyards produced the world's largest fleet that helped defeat the Axis powers in all corners of the globe. A colossal endeavor that absorbed billions and employed virtual armies of skilled workers, naval construction mobilized the nation's leading industrial enterprises in the shipbuilding, engineering, and steel industries to deliver warships whose technical complexity dwarfed that of any other weapons platform.

Based on systematic comparisons with British, Japanese, and German naval construction, Thomas Heinrich pinpoints the distinct features of American shipbuilding methods, technology development, and management practices that enabled U.S. yards to vastly outproduce their foreign counterparts. Throughout the book, comparative analyses reveal differences and similarities in American, British, Japanese, and German naval construction. Heinrich shows that U.S. and German shipyards introduced electric arc welding and prefabrication methods to a far greater extent than their British and Japanese counterparts between the wars, laying the groundwork for their impressive production records in World War II. While the American and Japanese navies relied heavily on government-owned navy yards, the British and German navies had most of their combatants built in corporately-owned yards, contradicting the widespread notion that only U.S. industrial mobilization depended on private enterprise. Lastly, the U.S. government's investments into shipbuilding facilities in both private and government-owned shipyards dwarfed the sums British, Japanese, and German counterparts expended. This enabled American builders to deliver a vast fleet that played a pivotal role in global naval combat. ?
