This handbook is a compilation of the current practical knowledge of flexible manufacturing systems (FMS). FMS allow manufacturing plants of all sizes to reduce their inventory while increasing their ability to meet consumer demands. By controlling automatic guided vehicles, robots, and machine tools with one central computer, products can now be produced in a variety of styles and models all at the same time. FMS are designed to adapt quickly and economically to changes in requirements and to unpredictable events. This guide explains how to effectively employ these useful new systems. Includes specifications for software to implement simulation modeling Surveys practical applications in the workplace Presents materials in a step-by-step workbook style

Chris Brady has written this book after many years developing the highly successful and informative Boeing 737 Technical Site, known throughout the world by pilots, trainers and engineers as the most authoritative open source of information freely available about the 737.

One of the primary applications of human factors engineering is in the aviation domain, and the importance of human factors has never been greater as U.S. and European authorities seek to modernize the air transportation system through the introduction of advanced automation. This handbook provides regulators, practitioners, researchers, and educators a comprehensive resource for understanding and applying human factors to air transportation.

This book first addresses substantive issues, beginning with the changing role of business torts in antitrust litigation and continuing with the extent to which antitrust concepts have been invoked in business tort litigation (focusing on the competitive privilege and the Noerr-Pennington defense). The next chapter surveys the field of unfair competition, followed by an examination of the business torts of commercial disparagement and defamation. Subsequent chapters address interference torts, the common
