The epic fifth novel in the Matthew Shardlake Tudor Mystery series by the bestselling author of Winter in Madrid and Dominion Summer 1545. A massive French armada is threatening England, and Henry VIII has plunged the country into economic crisis to finance the war. Meanwhile, an old servant of Queen Catherine Parr has asked Matthew Shardlake to investigate claims of "monstrous" wrongs committed against a young ward of the court. As the French fleet approaches, Shardlake's inquiries reunite him with an old friend-and an old enemy close to the throne. This fast-paced fifth installment in C. J. Sansom's "richly entertaining and reassuringly scholarly series" (Marilyn Stasio, The New York Times Book Review) will enchant fans of Wolf Hall, Bring Up the Bodies, and The Other Boleyn Girl.

The book that helped inspire Anthony Doerr's All the Light We Cannot See An updated edition of this classic World War II memoir, chosen as one of the 100 Best Spiritual Books of the Twentieth Century, with a new photo insert and restored passages from the original French edition When Jacques Lusseyran was an eight-year-old Parisian schoolboy, he was blinded in an accident. He finished his schooling determined to participate in the world around him. In 1941, when he was seventeen, that world was Nazi-occupied France. Lusseyran formed a resistance group with fifty-two boys and used his heightened senses to recruit the best. Eventually, Lusseyran was arrested and sent to the Buchenwald concentration camp in a transport of two thousand resistance fighters. He was one of only thirty from the transport to survive. His gripping story is one of the most powerful and insightful descriptions of living and thriving with blindness, or indeed any challenge, ever published.

The first report in a new flagship series, WIPO Technology Trends, aims to shed light on the trends in innovation in artificial intelligence since the field first developed in the 1950s.

This book offers comprehensive, easy to understand guidance for medical device technology innovators on how to work through the United States FDA regulatory review process, while also providing insight on the various intellectual property concerns that many medical device innovators face. In the first portion of this book, readers are introduced to important concepts concerning FDA compliance for medical devices, as well as strategies for successfully navigating the FDA regulatory review process. Specifically, the first portion discusses the expansive range of medical devices and then walks through the most common routes to market: the PMA and 510(k) application processes. In the second portion of this book, readers are introduced to the various types of intellectual property rights that are available for medical device technology inventions and innovations, and can explore ways to overcome unique intellectual property challenges faced by many medical device technology innovators. In the third portion of the book, specific strategies are discussed to navigate the interface between the FDA regulatory process and the process of obtaining intellectual property protection. This book also includes a number of descriptive examples, case studies and scenarios to illustrate the topics discussed, and is intended for use by medical device designers, developers and innovators.

A Social History of Sheffield Boxing combines urban ethnography and anthropology, sociological theory and place and life histories to explore the global phenomenon of boxing. Raising many issues pertinent to the social sciences, such as contestations around state regulation of violence, commerce and broadcasting, pedagogy and elite sport and how sport is delivered and narrated to the masses, the book studies the history of boxing in Sheffield and the sport's impact on the cultural, political and economic development of the city since the 18th century. Interweaving urban anthropology with sports studies and historical research the text expertly examines a variety of published sources, ranging from academic papers to biographies and from newspaper reports to case studies and contemporary interviews. In Volume II, Bell and Armstrong examine the revival of Sheffield boxing after the decline of the 1950s and 1960s outlined in Volume I. Instigated by two men from outside the city-Brendan Ingle and Herol Graham-this renaissance became known as the 'Ingle style,' which between 1995 and 2014 produced four world champions: Naseem Hamed, Johnny Nelson, Junior Witter and Kell Brook. These successes inspired others and raised Sheffield's profile as a boxing city, which in the 1990s and 2000s produced two more world champions in Paul 'Silky' Jones and Clinton Woods. In this second volume, Bell and Armstrong track the resurgence of boxing to the present day and consider how the game and its players have changed over time.

The provision of assistive technology is an important individual and collective service of the welfare state. The state plays a significant role towards linking users and products, and the matching of devices and users is both a science and an art. However, many people feel it is stigmatising to use individually designed assistive technologies as they often, in a subtle way, convey discriminating barriers in society. The major challenges of assistive technology are thus to reduce social exclusion and marginalisation and, importantly, to reduce individual risks and societal costs related to non-use due to deficiencies in usability, aesthetics and design of the technologies. This groundbreaking book discusses the relationships among society, disability and technology by using different empirical examples (e.g., school, everyday life) to show why the combination of disability studies and STS-studies (science, technology and society) is a fruitful approach to understanding and meeting these challenges. The book explores the significance of the technologies for users, society and the field; identifies challenges to designing, adopting and using assistive technologies; and points at theoretical challenges in research as well as professional challenges in assistive technology service provision. The book also scrutinises the role of assistive technology devices, as well as the organisational structure of the assistive technology market, in relation to disabled people's lives. This book will be valuable reading for students, academics, teachers and social educators interested in Disability Studies, STS Studies, Product Design, Sociology, Occupational Therapy and Physiotherapy, as well as engineers working in the field of assistive technology.

Advanced therapies and technologies, new service delivery methods, and care upgrades in underserved areas are translating into improved quality of life for millions with disabilities. Occupational therapy parallels this progress at the individual level, balancing short-term recovery and adaptation with long-term independence and well-being. This Second Edition of the International Handbook of Occupational Therapy Interventions builds on its ground-breaking predecessor by modelling current clinical standards rooted in scientific evidence-based practice. Its interventions are applied to a diverse range of client disabilities, with many new or rewritten chapters on workplace and vehicle accommodations, smart home technologies, end-of-life planning, and other salient topics. New introductory chapters spotlight core competencies in the field, from assessing client needs and choosing appropriate interventions to evaluating programs and weighing priorities. And for increased educational value, interactive case studies allow readers an extra avenue for honing clinical reasoning and decision-making skills. Of particular note is a new chapter providing a taxonomy-the Occupational Therapy Intervention Framework-and a validation study of its categories and concepts, delineating the occupational therapist's roles and the expected outcomes. Intervention areas featured in the Handbook include: ? Adaptive interventions, OTs manage and facilitate clients' adaptations. ? Learning interventions, OTs teach and the clients learn or relearn. ? Enabling interventions, OTs enable clients to be meaningfully occupied. ? Preventing interventions, OTs prevent ill-health and promote clients' ability to sustain health in daily life. The Second Edition of the International Handbook of Occupational Therapy Interventions is career-affirming reading for all members of rehabilitation teams, including occupational and physical therapists and rehabilitation nurses. Students intending to enter this growing field and professionals working toward its continued improvement will find it useful and inspiring.

This book provides a thorough overview of cutting-edge research on electronics applications relevant to industry, the environment, and society at large. It covers a broad spectrum of application domains, from automotive to space and from health to security, while devoting special attention to the use of embedded devices and sensors for imaging, communication and control. The book is based on the 2017 ApplePies Conference, held in Rome, Italy in September 2017, which brought together researchers and stakeholders to consider the most significant current trends in the field of applied electronics and to debate visions for the future. Areas addressed by the conference included information communication technology; biotechnology and biomedical imaging; space; secure, clean and efficient energy; the environment; and smart, green and integrated transport. As electronics technology continues to develop ahead, constantly meeting previously unthinkable targets, further attention needs to be directed toward the electronics applications and the development of systems that facilitate human activities. This book, written by industrial and academic professionals, represents a valuable contribution in this endeavor.

Popular consensus says that the US rose over two centuries to Cold War victory and world domination, and is now in slow decline. But is this right? History's great civilizations have always lasted much longer, and for all its colossal power, American culture was overshadowed by Europe until recently. What if this isn't the end? In History Has Begun, Bruno Maçães offers a compelling vision of America's future, both fascinating and unnerving. From the early American Republic, he takes us to the turbulent present, when, he argues, America is finally forging its own path. We can see the birth pangs of this new civilization in today's debates on guns, religion, foreign policy and the significance of Trump. Should the coronavirus pandemic be regarded as an opportunity to build a new kind of society? What will its values be, and what will this new America look like? Maçães traces the long arc of US history to argue that in contrast to those who see the US on the cusp of decline, it may well be simply shifting to a new model, one equally powerful but no longer liberal. Consequently, it is no longer enough to analyze America's current trajectory through the simple prism of decline vs. progress, which assumes a static model-America as liberal leviathan. Rather, Maçães argues that America may be casting off the liberalism that has defined the country since its founding for a new model, one more appropriate to succeeding in a transformed world.
