Corporate capitalism has been criticized for the amount of power and influence corporations and large business interest groups have over government policy, including the policies of regulatory agencies and influencing political campaigns (see corporate welfare). Many social scientists have criticized corporations for failing to act in the interests of the people, and their existence seems to circumvent the principles of democracy, which assumes equal power relations between individuals in a ...

Capitalism is a social and economic system which recognizes individual rights, including the right to own properties and the possession of goods for the individual's personal consumption. Corporatism, on the other hand, is a form of economy that was created as an option to socialism and intends to achieve social justice and equality without the need to take away private property from individual members of society.

Samuel Mansell critiques the principles of stakeholder theory, proposing instead a qualified version of Friedman's shareholder theory.

In this important book, Bryn Jones uses insights from political economy, historical analysis and sociological concepts of the corporation, as a socially disembedded but political actor, to address concerns over the over-reach of Anglo-Saxon corporations. These firms are compared with their continental European and East Asian counterparts, both in their social and economic functions and their institutional structures. Jones then draws on alternative models proposed by advocates of CSR, cooperative enterprise and corporate democratisation, to argue for key reforms for corporations' greater social accountability.

Originally published in 2005, This book analyzes the evolution of administrative thought from the nineteenth century to the present, considering it as ideological discourse. Rather than merely being a succession of fads, Gantman shows how each successive discourse about the organization of work serves to legitimate social interests. The book's compelling conclusion is that instead of a tendency towards increasing theoretical refinement, what is more evident is a trend towards fictionalization, which ends in the contemporary paradigm of flatter, more participative and democratic organizational forms. Students and scholars interested in organization theory, management history, the sociology of work or critical management will gain many new insights from this historical reconstruction of the evolution of management thought.

This is the first in-depth examination of the important ongoing fusion of activism, capitalism, and social change masterfully told through a compelling narrative filled with vivid stories and striking studies. Today, corporations and their executives are at the front lines of some of the most important and contentious social and political issues of our time, such as voting rights, gun violence, racial justice, immigration reform, climate change, and gender equality. Why is this sea change in business and activism happening? How should executives and activists engage one another to create meaningful progress? What are potential pitfalls and risks for each side? What can they learn from each other? What first principles should guide leaders moving forward? The Capitalist and the Activist offers an engaging and thoughtful look at the new reality of corporate social activism--its driving forces, promises and perils, and implications for our businesses and personal lives. Weaving deep research and fascinating stories that span business, entertainment, history, science, and politics, Tom Lin provides an insightful road map for how society arrived here and a practical compass for moving forward. Drawing together examples from the civil rights movement, campaign finance litigation, gun regulation, Black Lives Matter, the Confederate flag controversy, the Trump presidency, and other historical events, Lin brilliantly reveals and charts the course for a changing society of capitalists and activists seeking both profit and progress. The Capitalist and the Activist is a must-read for anyone trying to understand the emerging future of activism, business, and politics.

Despite the influence corporations wield over all aspects of everyday life, there has been a remarkable absence of critical inquiry into the social constitution of this power. In analysing the complex relationship between corporate power and the widespread phenomenon of share ownership, this book seeks to map and define the nature of resistance and domination in contemporary capitalism. Drawing on a Marxist-informed framework, this book reconnects the social constitution of corporate power and changing forms of shareholder activism. In contrast to other texts that deal with corporate governance, this study examines a diverse and comprehensive set of themes, from socially responsible investing to labour-led shareholder activism and its limitations. Through this ambitious and critical study, author Susanne Soederberg demonstrates how the corporate governance doctrine represents an inherent feature of neoliberal rule, effectively disembedding and depoliticising relations of domination and resistance from the wider power and paradoxes of capitalism. Examining corporate governance and shareholder activism in a number of different contexts that include the United States and the global South, this important book will be of interest to students and scholars of international political economy, international relations and development studies. It will also be of relevance to a wider range of disciplines including finance, economics, and business and management studies. Winner of the Davidson/Studies in Political Economy Award.

Climate change is one of the greatest threats facing humanity, a definitive manifestation of the well-worn links between progress and devastation. This book explores the complex relationship that the corporate world has with climate change and examines the central role of corporations in shaping political and social responses to the climate crisis. The principal message of the book is that despite the need for dramatic economic and political change, corporate capitalism continues to rely on the maintenance of 'business as usual'. The authors explore the different processes through which corporations engage with climate change. Key discussion points include climate change as business risk, corporate climate politics, the role of justification and compromise, and managerial identity and emotional reactions to climate change. Written for researchers and graduate students, this book moves beyond descriptive and normative approaches to provide a sociologically and critically informed theory of corporate responses to climate change.

Reimagining our global economy so it becomes more sustainable and prosperous for all Our global economic system is broken. But we can replace the current picture of global upheaval, unsustainability, and uncertainty with one of an economy that works for all people, and the planet. First, we must eliminate rising income inequality within societies where productivity and wage growth has slowed. Second, we must reduce the dampening effect of monopoly market power wielded by large corporations on innovation and productivity gains. And finally, the short-sighted exploitation of natural resources that is corroding the environment and affecting the lives of many for the worse must end. The debate over the causes of the broken economy-laissez-faire government, poorly managed globalization, the rise of technology in favor of the few, or yet another reason-is wide open. Stakeholder Capitalism: A Global Economy that Works for Progress, People and Planet argues convincingly that if we don't start with recognizing the true shape of our problems, our current system will continue to fail us. To help us see our challenges more clearly, Schwab-the Founder and Executive Chairman of the World Economic Forum-looks for the real causes of our system's shortcomings, and for solutions in best practices from around the world in places as diverse as China, Denmark, Ethiopia, Germany, Indonesia, New Zealand, and Singapore. And in doing so, Schwab finds emerging examples of new ways of doing things that provide grounds for hope, including: Individual agency: how countries and policies can make a difference against large external forces A clearly defined social contract: agreement on shared values and goals allows government, business, and individuals to produce the most optimal outcomes Planning for future generations: short-sighted presentism harms our shared future, and that of those yet to be born Better measures of economic success: move beyond a myopic focus on GDP to more complete, human-scaled measures of societal flourishing By accurately describing our real situation, Stakeholder Capitalism is able to pinpoint achievable ways to deal with our problems. Chapter by chapter, Professor Schwab shows us that there are ways for everyone at all levels of society to reshape the broken pieces of the global economy and-country by country, company by company, and citizen by citizen-glue them back together in a way that benefits us all.

Large multinational corporations shape our lives to an enormous extent. How is the growth, power, and significance of big business to be explained and understood? Focusing on the issues of ownership, control, and class formation, Corporate Business and Capitalist Classes explores the implications of changes in the nature of big business, which affect both the businesses themselves, and the economic and political milieu in which these multinationals operate. Up-to-date empirical evidence is reviewed in a wide-ranging comparative framework that covers Britain and the United States, Germany, France, Japan, and many other societies, including emerging forms of capitalism in China and Russia. Unlike other specialist texts in the area, Corporate Business and Capitalist Classes relates its concerns to issues of social stratification and class structure. The first and second editions of the book (under the title Corporations, Classes and Capitalism) were enthusiastically received, and the present edition reviews new theoretical ideas and empirical evidence that has emerged in the ten years since the second edition appeared. The text has been completely re-written and re-structured, and it relates its concerns to contemporary debates over 'disorganized capitalism' and post-industrialism.

The corporate and the social are crucial themes of our times. In the first decade of the twenty-first century, both individual lives and society were shaped by capitalist crisis and the rise of social media. But what marks the distinctively social character of "social media"? And how does it relate to the wider social and economic context of contemporary capitalism? The concept of Corporate Social Responsibility (CSR) is based on the idea that a socially responsible capitalism is possible: this suggests that capitalist media corporations can not only enable social interaction and cooperation but also be socially responsible. This book provides a critical and provocative perspective on Corporate Social Responsibility (CSR) in media and communication industries. It examines both the academic discourse on CSR and actual corporate practices in the media sector, offering a double critique that reveals contradictions between corporate interests and social responsibilities. Mariol Sandoval's political economic analysis of Apple, AT&T, Google, HP, Microsoft, News Corp, the Walt Disney Company and Vivendi shows that media and communication in the twenty-first century are confronted with fundamental social responsibility challenges. From software patents and intellectual property rights to privacy on the Internet, from working conditions in electronics manufacturing to hidden flows of eWaste - this book encourages the reader to explore the multifaceted social (ir)responsibilities that shape commercial media landscapes today. It makes a compelling argument for thinking beyond the corporate in order to envision and bring about truly social media. It will interest students and scholars of media studies, cultural industry studies, sociology, information society studies, organization studies, political economy, business and management.
