Development. However, today's success is built on over a century of visionary hard work and outreach. *Scattering the Seeds of Knowledge: The Words and Works of Indiana's Pioneer County Extension Agents* chronicles the tales of the first county Extension agents, from 1912 to 1939. Their story brings readers back to a day when Extension was little more than words on paper, when county agents traveled the muddy back roads, stopping at each farm, introducing themselves to the farmer and his family. These Extension women and men had great confidence in the research and the best practices they represented, and a commanding knowledge of the inner workings of farms and rural residents. Most importantly, however, they had a knack with people. In many cases they were given the cold shoulder at first by the farmers they were sent to help. However, through old-fashioned, can-do perseverance and a dogged determination to make a difference in the lives of people, these county Extension agents slowly inched the state forward one farmer at a time. Their story is a history lesson on what agriculture was like at the turn of the twentieth century, and a lesson to us all about how patient outreach and dedicated engagement-backed by proven science from university research-reshaped and modernized Indiana agriculture.

A linguistic corpus is a collection of texts which have been selected and brought together so that language can be studied on the computer. Today, corpus linguistics offers some of the most powerful new procedures for the analysis of language, and the impact of this dynamic and expanding sub-discipline is making itself felt in many areas of language study. In this volume, a selection of leading experts in various key areas of corpus construction offer advice in a readable and largely non-technical style to help the reader to ensure that their corpus is well designed and fit for the intended purpose. This guide is aimed at those who are at some stage of building a linguistic corpus. Little or no knowledge of corpus linguistics or computational procedures is assumed, although it is hoped that more advanced users will find the guidelines here useful. It is also aimed at those who are not building a corpus, but who need to know something about the issues involved in the design of corpora in order to choose between available resources and to help draw conclusions from their studies.
