This handbook is vital for understanding the origin of deep-water sandstones, emphasizing sandy-mass transport deposits (SMTDs) and bottom-current reworked sands (BCRSs) in petroleum reservoirs. This cutting-edge perspective, a pragmatic alternative to the conventional turbidite concepts, is crucial because the turbidite paradigm is built on a dubious foundation without empirical data on sandy turbidity currents in modern oceans. In the absence of evidence for sandy turbidity currents in natural environments, elegant theoretical models and experimental observations of turbidity currents are irrelevant substitutes for explaining the origin of sandy deposits as "turbidites." In documenting modern and ancient SMTDs (sandy slides, sandy slumps, and sandy debrites) and BCRSs (deposits of thermohaline [contour] currents, wind-driven currents, and tidal currents), the author describes and interprets core and outcrop (1:20 to 1:50 scale) from 35 case studies worldwide (which include 32 petroleum reservoirs), totaling more than 10,000 m in cumulative thickness, carried out during the past 36 years (1974-2010). The book dispels myths about the importance of sea level lowstand and provides much-needed clarity on the triggering of sediment failures by

earthquakes, meteorite impacts, tsunamis, and cyclones with implications for the distribution of deep-water sandstone petroleum reservoirs. Sand injectites form during shallow-crustal deformation. Short periods of elevated pore-fluid pressure, which developed regionally, triggered formation of hydrofracture networks into which sand was sometimes injected. Sand injection complexes preserve a record of this process and sandstone intrusions are significant reservoirs in many petroleum systems. Most known subsurface sand injection complexes are from offshore NW Europe and associated with Paleogene strata. Outcrop occurrence is global. Sand injection into unconventional host rocks, including granitoid and metamorphic basement and coal seams, raises awareness of the breadth of geological environments in which sand injection may occur. Discordance between sandstone intrusions and sedimentary hosts occurs on a scale from millimetres to kilometres and is a fundamental diagnostic of intrusions. Microscale textural characterization provides new opportunities to establish possible additional criteria for differentiating intrusions from depositional sandstone. The significance of sand injection complexes in shallow crustal evolution is exemplified by the wide range of lithological hosts and diverse tectonostratigraphic settings documented in this volume. Potential for original research still remains.

International Law and Sustainable Development: Past Achievements and Future Challenges is a collection of essays that cover some of the most important contemporary issues in contemporary law relating to sustainable development, the utilization of natural resources, and the protection of the environment. Written by well-known experts on these topics who include judges of the International Court of Justice and the International Tribunal for the Law of the Sea; legal advisers from international organizations such as the World Bank, the International Maritime Organization, and the Food and Agriculture Organization; and practitioners of international law, as well as some of the leading scholars writing on international environmental law and related subjects this book covers many of the major legal developments that have taken place since the United Nations Conference on Environmental Development held in Rio de Janeiro in 1992. The contributors bring new perspectives on sustainable development as a legal principle, the role of the International Law Commission in codifying international environmental law, the protection of the marine environment following the entry into force of the 1982 UN Convention of the Law of the Sea, and the revolution in international fisheries law. The editors have ensured that the book covers a wide range of topics from Antarctica to small whales and the book will be of particular interest to those teaching or practising law of the sea and international environmental law.
