Biology for AP® courses covers the scope and sequence requirements of a typical two-semester Advanced Placement® biology course. The text provides comprehensive coverage of foundational research and core biology concepts through an evolutionary lens. Biology for AP® Courses was designed to meet and exceed the requirements of the College Board's AP® Biology framework while allowing significant flexibility for instructors. Each section of the book includes an introduction based on the AP® curriculum and includes rich features that engage students in scientific practice and AP® test preparation; it also highlights careers and research opportunities in biological sciences.

Peterson's Graduate Programs in the Biological Sciences 2012 contains a wealth of information on accredited institutions offering graduate degree programs in these fields. Up-to-date data, collected through Peterson's Annual Survey of Graduate and Professional Institutions, provides valuable information on degree offerings, professional accreditation, jointly offered degrees, part-time and evening/weekend programs, postbaccalaureate distance degrees, faculty, students, requirements, expenses, financial support, faculty research, and unit head and application contact information. There are helpful links to in-depth descriptions about a specific graduate program or department,

Covering the most important material taught in high school biology class, this essential review book breaks need-to-know content into accessible, easily understood lessons. Inside this book, you'll find:

- Clear, concise summaries of the most important concepts, terms, and functions in biology
- Diagrams, charts, and graphs for quick visual reference
- Easy-to-follow content organization and illustrations

With its friendly, straightforward approach and a clean, modern design crafted to appeal to visual learners, this guidebook is perfect for catching up in class or getting ahead on exam review. Topics covered in Fast Track: Biology include:

- The chemistry of life
- Cells and cellular energetics
- Molecular genetics
- Heredity and genetics
- Evolutionary biology and natural selection
- Cell reproduction
- Animal structure and function
- Behavior and ecology
- Biostatistics
- Plants ... and more!

Originally published in 1985. China is currently making a massive effort to educate its workforce in a formal and structured

system. A good deal has been written about China's attempts, since 1949, to eradicate illiteracy and to universalise primary and secondary school education but the subject of this book is an educational system established to meet the needs of those already employed whether in government, industry or agriculture. Two study teams, sponsored by the International Council for Adult Education, visited China in 1981 to explore this educational phenomenon. Their findings, updated by subsequent ICAE visits and enriched by further reading, form the basis of this book. This is the story of the Chinese experience of developing adult education. It will be valuable to those involved in extending education in the industrialised world who are pursuing modernisation goals for people long excluded from the formal education system.

The major subdisciplines of ecology--population ecology, community ecology, ecosystem ecology, and evolutionary ecology--have diverged increasingly in recent decades. What is critically needed today is an integrated, real-world approach to ecology that reflects the interdependency of biodiversity and ecosystem functioning. From Populations to Ecosystems proposes an innovative theoretical synthesis that will enable us to advance our fundamental understanding of ecological systems and help us to respond to today's emerging global

ecological crisis. Michel Loreau begins by explaining how the principles of population dynamics and ecosystem functioning can be merged. He then addresses key issues in the study of biodiversity and ecosystems, such as functional complementarity, food webs, stability and complexity, material cycling, and metacommunities. Loreau describes the most recent theoretical advances that link the properties of individual populations to the aggregate properties of communities, and the properties of functional groups or trophic levels to the functioning of whole ecosystems, placing special emphasis on the relationship between biodiversity and ecosystem functioning. Finally, he turns his attention to the controversial issue of the evolution of entire ecosystems and their properties, laying the theoretical foundations for a genuine evolutionary ecosystem ecology. From Populations to Ecosystems points the way to a much-needed synthesis in ecology, one that offers a fuller understanding of ecosystem processes in the natural world.

Even though contemporary biology and mathematics are inextricably linked, high school biology and mathematics courses have traditionally been taught in isolation. But this is beginning to change. This volume presents papers related to the integration of biology and mathematics in high school classes. The first part of the book provides

the rationale for integrating mathematics and biology in high school courses as well as opportunities for doing so. The second part explores the development and integration of curricular materials and includes responses from teachers. Papers in the third part of the book explore the interconnections between biology and mathematics in light of new technologies in biology. The last paper in the book discusses what works and what doesn't and presents positive responses from students to the integration of mathematics and biology in their classes.
