Impact Factor Scientific Journals: 2012 – 4x1px.me
Jobs, grants, prestige and career advancement are all partially based on an admittedly flawed concept: the journal Impact Factor. Impact factors have been becoming increasingly meaningless since 1991, writes George Lozano, who finds that the variance of papers ’ citation rates around their journals ’ IF has been rising steadily.. Thomson Reuters assigns most journals a yearly Impact Factor ...

The demise of the Impact Factor: The strength of the ...
The impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years. It is denoted as a ratio between citations and recent citable items published. You can either refer to the Journal Citation Reports (JCR) or the Scopus® database to find the impact factor of the journal.

Journal Impact Factor 2014 Impact Factor List 2012 ...
The impact factor or journal impact factor of an academic journal is a scientometric index that reflects the yearly average number of citations that articles published in the last two years in a given journal received. It is frequently used as a proxy for the relative importance of a journal within its field; journals with higher impact factors are often deemed to be more important than those with lower ones.

Scientific communication depends primarily on publishing in journals. The most important indicator to determine the influence of a journal is the Impact Factor. Since this factor only measures the average number of citations per article in a certain time window, it can be argued that it does not reflect the actual value of a periodical. This book defines five dimensions, which build a framework for a multidimensional method of journal evaluation. The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011.
--

This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents and electronic communications, the individual chapters, written by leading experts, discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes, such as the journal impact factor and the h-index, as well as allmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes multiple chapters that explain different aspects of patent statistics, patent classification and database search methods to retrieve patent-related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

Competition to publish in the top journals is fierce. This book provides entrepreneurship researchers with relevant material and insights to support them in their efforts to publish their research in the most prestigious entrepreneurship outlets. &a

Introduction: Annual scientific meetings serve as a forum for dissemination of new research findings. Presentations should be of high scientific quality as they have the potential to impact future research projects and current clinical practice. The publication rate of podium presentations at an annual meeting can be used to assess the quality of the research presented. The purpose of this study was to determine the publication rate of podium presentations at the 2012 u2013 2014 Orthopaedic Research Society (ORS) annual meetings.Methods: All podium presentations from the 2012 u2013 2014 ORS annual meetings were identified. A PubMed search was performed to determine if an abstract reached publication in a peer-reviewed journal. All podium presentations were categorized into a specific orthopaedic topic to determine if there were differences in the publication rate according to the topic. The journal of each full-text publication was identified, as well as the journal impact factor. The time to publication for each published abstract was calculated based on the date of the ORS meeting and the date of publication (rounded to the nearest month). The country and institution of origin of each full-text publication was also recorded.Results: There were a total of 1063 podium presentations at the 2012 u2013 2014 ORS annual meetings. Of these abstracts, 640 were subsequently published in a peer-reviewed journal for an overall publication rate of 60.2%. New Investigator Recognition Award (NIRA) podium presentations had an overall publication rate of 63.5%, though this was not significantly higher than the publication rate of non-recognized presentations at 59.8% (p = 0.5245). The orthopaedic topic with the greatest percentage of podium presentations was cartilage biology (27.1%), followed by bone biology (18.0%) and ligament/tendon biology (13.2%). Abstracts categorized as upper extremity had the highest publication rate (71.1%), followed by spine (66.7%) and bone biology (63.4%). Podium presentations were published in 151 different journals with the journal impact factor ranging from 0.56 to 39.24. The average impact factor for all of the published abstracts was 4.46. The top three most frequent journals for publication were Journal of Orthopaedic Research (10.6%), Journal of Biomechanics (5.2%), and PLoS ONE (5.2%). Time to publication varied significantly by journal (p = 0.025). The majority (75.9%) of abstracts that reached publication did so within 2 years. At 67.0%, the United States was the most common country of origin of all full-text publications, followed by Japan (10.9%) and Canada (3.6%). The top three academic institutions for publication were University of Pennsylvania (5.8%), Cornell University (3.6%), and Columbia University (3.4%). Discussion: The ORS annual meeting is a leading forum for the presentation of high-quality research in the field of surgery and musculoskeletal disease. In 1998, Daluiski et al. reported an overall publication rate of 52% for podium presentations at the 1991 u2013 1993 ORS annual meetings. To our knowledge, no studies evaluating the publication rate of ORS presentations have been conducted since that time. In our study, we found an overall publication rate of 60.2%, which is significantly higher than what was reported over two decades ago (p = 0.0004). This finding might suggest an improvement in the quality of research presented at the meeting. Furthermore, a rate of 60.2% is within the upper range of previously reported publication rates for other orthopaedic surgery meetings.

Complexities in Colorectal Surgery: Decision-Making and Management provides a unique, modern, practical guide that covers the strategic evaluation, specific approaches, and detailed management techniques utilized by expert Colorectal Surgeons caring for patients with complex problems—whether they result from underlying colorectal disease or from complications arising from previous surgical therapy. The text is formatted as both a “ how-to ” manual as well as an algorithm-based guide allowing the reader to understand the thought process behind the proposed treatment strategies. By making use of evidence-based recommendations, each chapter will include not only diagnostic and therapeutic guidelines, but also a narrative by the author on his/her operative technical details and perioperative “ tips and tricks ” that they utilize in the management of these complex surgical challenges. This test includes chapters on the assessment of risk and nutritional intervention methods utilized to minimize perioperative complications. In addition, sections on medical and surgical therapies for abdominal, pelvic and anorectal disease are incorporated. Moreover, the technical challenges of managing complications resulting from the original or subsequent operations is addressed. The underlying focus throughout the text is to provide pragmatic and understandable solutions that can be readily implemented by surgeons of varying experience to successfully treat complex colorectal problems. The text also goes beyond the technical aspects of Colorectal Surgery and includes special sections highlighting the essence of a surgeon. These include chapters describing the importance of the first encounter, building patient rapport, and demonstrating confidence and competence while showing humility and avoiding arrogance. Additionally, aspects involving the medical-legal, ethical, and economic challenges confronting surgeons are covered.

’ Represents the culmination of an 18-month-long project that aims to be the definitive review of this important topic. Accompanied by a scholarly literature review, some new analysis, and a wealth of evidence and insight... the report is a tour de force: a once-in-a-generation opportunity to take stock. ’ — Dr Steven Hill, Head of Policy, HEFCE, LSE Impact of Social Sciences Blog ‘ A must-read if you are interested in having a deeper understanding of research culture, management issues and the range of information we have on this field. It should be disseminated and discussed within institutions, disciplines and other sites of research collaboration. ’ — Dr Meera Sabaratnam, Lecturer in International Relations at the School of Oriental and African Studies, University of London, LSE Impact of Social Sciences Blog Metrics evoke a mixed reaction from the research community. A commitment to using data and evidence to inform decisions makes many of us sympathetic, even enthusiastic, about the prospect of granular, real-time analysis of our own activities. Yet we only have to look around us at the blunt use of metrics to be reminded of the pitfalls. Metrics hold real power: they are constitutive of values, identities and livelihoods. How to exercise that power to positive ends is the focus of this book. Using extensive evidence-gathering, analysis and consultation, the authors take a thorough look at potential uses and limitations of research metrics and indicators. They explore the use of metrics across different disciplines, assess their potential contribution to the development of research excellence and impact and consider the changing ways in which universities are using quantitative indicators in their management systems. Finally, they consider the negative or unintended effects of metrics on various aspects of research culture. Including an updated introduction from James Wilsdon, the book proposes a framework for responsible metrics and makes a series of targeted recommendations to show how responsible metrics can be applied in research management, by funders, and in the next cycle of the Research Excellence Framework. The metric tide is certainly rising. Unlike King Canute, we have the agency and opportunity — and in this book, a serious body of evidence — to influence how it washes through higher education and research.
