As "Paris is France," so Seoul may be said to be Korea, for it is the centre from which nearly every thing for the country either originates or is disseminated. Officers ruling over country districts usually have their "house in town," and

expect to spend a portion, at least, of their time within the walls of the capital. While some of the provincial capitals are said to contain more people and to be more celebrated for certain reasons, Seoul is the home of the King and the Mecca of his faithful subjects. A description of this city may, therefore, answer for all. The capital is a city of some 300,000 inhabitants, half of whom, perhaps, live in the extensive suburbs without the walls. It lies in a basin of granite sand, surrounded by high mountains and their projecting ridges, over which climbs the high, thick, encircling wall of masonry; pierced at convenient points by massive, pagoda-roofed gates, amply strong enough for defense against the weapons of war in use at the time of building this great relic of seclusion. The city is traversed by broad avenues from which

runs a perfect labyrinth of narrow streets. Originally none of these streets were less than twenty feet wide, and some of the avenues leading up to the imposing gates of the palaces are even now a good two hundred feet in width. But the streets have all been encroached upon by the little temporary thatched booths of the petty retail dealers, so that, with the exception of the approaches to the palaces, the line is broken, the streets made tortuous, and only here and there a broad open spot indicates the original width of the thoroughfare. Originally every street was furnished with its sewer—open in the smaller streets, while the avenues were drained by great covered sewers of stonework. Occasionally the proprietor of one of the little temporary booths would put a foundation under his structure, bridging over the sewer, until

now the streets have in many cases become mere crooked alleys, and but for the bountiful rains, the excellent natural drainage, and the character of the soil, the mortality would be very great instead of being less than in ordinary American cities. No attempt is made towards street decoration, as that would attract the attention of thieves. The magnificent grounds of a nobleman, with their artificial lakes, flower gardens, water-worn pillars of ancient rock and quaintly twisted trees, may be enclosed by a row of tumble-down, smoke-begrimed servant-quarters that would never indicate the beauty to be found hidden within its forbidding exterior.

This book is a captivating account of a professional mathematician's experiences conducting a math circle for

preschoolers in his apartment in Moscow in the 1980s. As anyone who has taught or raised young children knows, mathematical education for little kids is a real mystery. What are they capable of? What should they learn first? How hard should they work? Should they even "work" at all? Should we push them, or just let them be? There are no correct answers to these questions, and the author deals with them in classic math-circle style: he doesn't ask and then answer a question, but shows us a problem--be it mathematical or pedagogical--and describes to us what happened. His book is a narrative about what he did, what he tried, what worked, what failed, but most important, what the kids experienced. This book does not purport to show you how to create precocious high achievers. It is just one person's story about

things he tried with a half-dozen young children.

Mathematicians, psychologists, educators, parents, and everybody interested in the intellectual development in young children will find this book to be an invaluable, inspiring resource. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).
