A two-term manual for General Chemistry This supplementary manual focuses on chemical principles and techniques. The Laboratory Manual for Principles of General Chemistry, tenth edition, provides a broad scope of experiments coupled with a clear layout for ease of use. The manual delivers material for two or three course terms. It also assists chemistry students in knowing how to time various techniques in the lab environment. The companion manual is organized into topic sections, such as Chemical and Physical Properties; Atomic and Molecular Structure; Gases; and Solutions.

Green chemistry involves designing novel ways to create and synthesize products and implement processes that will eliminate or greatly reduce negative environmental impacts. The Green Chemistry Laboratory Manual for General Chemistry provides educational laboratory materials that challenge students with the customary topics found in a general chemistry laboratory manual, while encouraging them to investigate the practice of green chemistry. Following a consistent format, each lab experiment begins with objectives and prelab questions highlighting important issues that must be understood prior to getting started. This is followed by detailed step-by-step procedures for performing the experiments. Students report specific results in sections designated for data, observations, and calculations. Once each experiment is completed, analysis questions test students' comprehension of the results. Additional questions encourage inquiry-based investigations and further research about how green chemistry principles compare with traditional, more hazardous experimental methods. By placing the learned concepts within the larger context of green chemistry principles, the lab manual enables students to see how these principles can be applied to real-world issues. Performing laboratory exercises through green experiments results in a safer learning environment, limits the quantity of hazardous waste generated, and reduces the cost for chemicals and waste disposal. Students using this manual will gain a greater appreciation for green chemistry principles and the possibilities for future use in their chosen careers.

The Laboratory Manual for General, Organic, and Biological Chemistry by Applegate, Neely, and Sakuta was authored to be the most current lab manual available for the GOB market, incorporating the most modern instrumentation and techniques. Illustrations and chemical structures were developed by the authors to conform to the most recent IUPAC conventions. A problem solving methodology is also utilized throughout the laboratory exercises. The Laboratory Manual for General, Organic, and Biological Chemistry by Applegate, Neely, and Sakuta is also designed with flexibility in mind to meet the differing lengths of GOB courses and variety of instrumentation available in GOB labs. Helpful instructor materials are also available on this companion website, including answers, solution recipes, best practices with common student issues and TA advice, sample syllabi, and a calculation sheet for the Density lab.
