WHO's Global School Health Initiative, launched in 1995, seeks to mobilise and strengthen health promotion and education activities at the local, national, regional and global levels. The Initiative is designed to improve the health of students, school personnel, families and other members of the community through schools.

[WHO | Global school health initiative](#)

The Initiative is designed to improve the health of students, school personnel, families and other members of the community through schools. The goal of WHO's Global School Health Initiative is to increase the number of schools that can truly be called "Health-Promoting Schools". Although definitions will vary, depending on need and circumstance, a Health-Promoting School can be characterised as a school constantly strengthening its capacity as a healthy setting for living, learning and working.

[WHO | What is a Health Promoting School?](#)

Health Promoting Schools have been recognized as a strategic vehicle to promote positive development and healthy behaviours such as

physical activity, physical fitness, recreation and play, balanced nutrition, prevent tobacco use, and preventing being bullied.

WHO | Making every school a health promoting school

Strives to improve the health of school personnel, families and community members as well as pupils; and works with community leaders to help them understand how the community contributes to, or undermines, health and education. Health promoting schools focus on: Caring for oneself and others; Making healthy decisions and taking control over life's circumstances; Creating conditions that are conducive to health (through policies, services, physical / social conditions)

WHO | What is a health promoting school?

Recognising this, a new holistic approach to school health promotion was developed in the late 1980s, which sought to promote health through the whole school environment and not just through 'health education' in the curriculum. This new 'Health Promoting Schools' (HPS) framework required action in three areas: 1. Formal health curriculum

A whole-school approach to promoting health in schools ...

A health promoting school is one that constantly strengthens its capacity as a healthy setting for living, learning and working.

Presents "World Health Organization's (WHO's) Global School Health Initiative: Helping Schools to Become 'Health-Promoting Schools,'" a June 1998 World Health Organization (WHO) fact sheet. Discusses the efforts of WHO to bring health promotion into schools and education.

A growing body of research identifies strong links between children's health, social and educational outcomes; it also notes the reciprocal benefits of access to quality education on individual and family health status. In response to these findings, the World Health Organization developed the concept of the Health-Promoting School (HPS), a living catalyst for healthy lives, and for positive changes that students can take home and into the community. *Case Studies in Global School Health Promotion* provides readers with a theoretical and research base needed to understand the methods used in communities all over the world to put this captivating concept in place. Case examples from over two dozen countries (representing urban and rural areas in developing and developed nations) outline the strategies taken to implement HPS programs in individual schools, municipalities, and nations. For each program, case study authors explain the problems they tackled, their motivation and supports to respond creatively; and the barriers they faced. In the cases, authors describe the capacities and infrastructure they created and mechanisms for cooperation; as well as the personnel, financial, and time requirements involved. Case studies were drawn from the following regions: Africa The Americas Europe Eastern Mediterranean South and Southeast Asia Western Pacific. *Case Studies in Global School Health Promotion* offers a world of insights, ideas, and guidance to those addressing social determinants of health at this formative stage, including: education and health policy makers; professionals and administrators; and researchers in national governments, universities, local schools, community, non-governmental organizations and civil society. The material provides interesting and useful information to those dedicated to these issues within WHO, FRESH Partners and other United Nations agencies. It is also an instructive text for graduate students in public health, education, allied health professions and social sciences.

No education system is effective unless it promotes the health and well-being of its students, staff and community. These strong links have never been more visible and compelling than in the context of the COVID-19 pandemic. A health-promoting school (HPS) approach was introduced over 25 years ago and has been promoted globally since; however, the aspiration of a fully embedded, sustainable HPS system has not yet been achieved, and very few countries have implemented and sustained the approach at scale. How can we make every school a health-promoting school, and how can we implement, sustain and scale up the approach at country level, particularly in low- and middle-income countries? All stakeholders involved in identifying, planning, funding, implementing, monitoring and evaluating the HPS approach will find some answers in this publication, which summarizes the experiences of eight countries spread across the world.

The Nutrition-Friendly Schools Initiative (NFSI) was developed in 2006 to provide a framework for ensuring integrated school-based programmes which address the double burden of nutrition-related ill health and to become the nutrition module of the Health Promoting Schools. The NFSI has since been used around the world, including as a self-appraisal tool for schools in 18 countries, in national NFSI programmes and as part of academic research and evaluation projects. The NFSI Framework outlines 26 essential criteria within five broad components: 1. school nutrition policies, 2. awareness and capacity building of the school community, 3. nutrition and health promoting curricula, 4. supportive school environment for good nutrition, and 5. supportive school nutrition and health services. This review summarizes the synthesized evidence from 117 reviews identified as relating to the five components and the 26 essential criteria of the NFSI. The findings may be used — in conjunction with existing UN and WHO guidance and tools — to inform the work of governments, policy-makers and researchers concerned with school-based health and nutrition promotion programmes and initiatives.
