Genetic programming (GP) is a systematic, domain-independent method for getting computers to solve problems automatically starting from a high-level statement of what needs to be done. Using ideas from natural evolution, GP starts from an ooze of random computer programs, and progressively refines them through processes of mutation and sexual recombination, until high-fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book.

"This new book on retail banking is both readable and innovative. Its analysis is unusually accessible in its style, and the book's conclusions and predictions will be rightly thought provoking. The customer is gaining real power and this new book's insights on the importance of leadership, the need to unleash creativity and to make a bank's IT and people resource work together more effectively for customer satisfaction are important pointers to the shape of future competitive differentiation." --Sir Mervyn Pedelty, Recently retired Chief Executive, The Co-operative Bank plc, smile, CIS and Co-operative Financial Services "A stimulating read. A readable and lively book that is always informative, sometimes controversial and invariably challenging. The authors don't expect readers to agree with it all, but the readers will undoubtedly gain some fresh insights and perspectives on the multiple issues facing management in a rapidly changing industry." --Chris Lendrum CBE, Recently retired Vice Chairman, Barclays Bank "This book is clear enough for the layman and thorough enough for any banker to obtain an excellent sense of the options for successful strategies for their retail businesses. The challenges of technology introduction, cost of production and scope of service are driving banks into responses increasingly similar to other industry sectors. These forces have been apparent for some years but are so evident now they can no longer be ignored. This book provides an excellent guide to mapping that future." --Joseph DeFeo, CEO, CLS Bank. "This is a useful guide to retail banking that provides a thought-provoking view on the state of The Art (of Better Retail Banking). Clearly retail banking can get better, and must! To steal an analogy from the conclusion, there is a sea change going on - consumers are looking more and more for greater simplicity and value, and so many banks are still making such heavy weather of it. This book does a good job of charting the current developments." -- Lindsay Sinclair, CEO, ING Direct UK. "A whistle-stop tour of all aspects of retail banking. This is a very readable and insightful real world mix of theory, strategy, tactics and practice. They have even managed to make banking sound exciting. But mostly they have been able to cut through the complexity to remind us all that success in retail banking is not just about finance and efficiency - it is about customers and staff, who are all too often forgotten about." --Craig Shannon, Executive Director - Marketing, Co-operative Financial Services. "The authors live up to their promise of providing managers and students with a clear exposition of the retail banking sector and how banks can confront the challenging future they face. This book is a practical manual with lots of useful advice. I was looking for new insights in this book - and I found them!" --Professor Adrian Payne, Professor of Services Marketing, Director, Centre for Services Management, Cranfield School of Management. "A key determinant of any organisation's success will be an enhanced understanding of 'value' as defined by customers, employees, shareholders and other stakeholders. Value can mean different things to these different groups, and this book has set itself the objective of identifying the approaches that will improve the value proposition for all of these interested parties. It achieves this objective." --Professor Steve Worthington, Faculty of Business and Economics, Monash University. "An enjoyable and useful read. It provides a good perspective on the role of IT and how IT suppliers and professionals need to contribute to future developments in retail banking strategy and implementation. It helps provide guidance for the significant challenges ahead for both suppl

Wealth management is one of the areas in which banks and other personal financial services players are investing heavily. But the market is changing fast. Going forward, players therefore need to adapt their strategies to the new realities: what worked in the past will not, for the most part, be appropriate in the future. This unique book, written by a former McKinsey consultant, offers an up-to-date, detailed, practical understanding of this exciting area of financial services.

The financial crisis is just beginning for retail institutions. Ninety to ninety-five per cent of bank transactions are executed electronically today. The Internet, ATMs, call centres and smartphones have become mainstream for customers. But banks still classify these as alternative channels and maintain an organisation structure where Branch dominates thinking. Continued technology innovations, Web 2.0, social networking, app phones and mobility are also stretching traditional banking models to the limit. BANK 2.0 reveals why customer behaviour is so rapidly changing, how branches will evolve, why cheques are disappearing, and why your mobile phone will replace your wallet all within the next 10 years.

"This book focuses on human, operational, managerial, and strategic organizational issues in e-banking"--Provided by publisher.

Banking experts review, simplify corporate lending process. James S. Sagner and Herbert Jacobs advise on corporate lending to help bankers, lenders and corporate finance managers avoid future credit problems in Handbook of Corporate Lending: A Guide for Bankers and Financial Managers. The authors argue for a fresh approach to improving bank lending to corporations. Historically, most banks spend their efforts in evaluating loan proposals from businesses before approving or denying credit. The authors argue persuasively and with examples that lending is a two-step process: the analysis of the company in the context of its industry and its competitors; and then a loan agreement that identifies the credit risks. The book demonstrates through the use of case studies how to limit those risks to the lenders and just as importantly, to the company. Sagner and Jacobs, former senior bankers and consultants and educators to the banking industry, systematically review the process of corporate credit decision-making. Too few banks are now providing adequate formal credit-training. This leaves bankers without the proper guidance to review credit requests and create precautions for corporate borrowers and lenders. Sagner and Jacobs show readers how such factors influence credit, funding, pricing decisions and proper structuring of loans. The book covers such topics as trends in commercial loan activity, the credit loan agreement, the banker's responsibilities, risk management measurement and the credit process. Eight cases in the book highlight a variety of credit issues. "The book is written from the perspective of the banker or other lender who makes these important decisions," said Sagner. "But business people, particularly global financial managers who must secure credit and maintain excellent relations with their lenders, need to understand this important information." Sagner and Jacobs help readers navigate the issues confronting financial and banking managers. The book aims to explain the financial processes lenders use to make decisions, and to analyze the strengths and weaknesses of credit measurements so that business and financial managers are better prepared to arrange credit facilities.

In its fifth edition, this report focuses on recent developments in Africa's banking sectors and the policy options for all stakeholders. The study of banking sectors across all African sub-regions includes the results of the EIB survey of banking groups operating in Africa. Three thematic chapters address challenges and opportunities for financing investment in Africa: Investing sustainably in Africa's cities; Mobilising agricultural value chain financing in Africa: why and how; Remittances and financial sector development in Africa.

This report analyses all aspects of cultural diversity, which has emerged as a key concern of the international community in recent decades, and maps out new approaches to monitoring and shaping the changes that are taking place. It highlights, in particular, the interrelated challenges of cultural diversity and intercultural dialogue and the way in which strong homogenizing forces are matched by persistent diversifying trends. The report proposes a series of ten policy-oriented recommendations, to the attention of States, intergovernmental and non-governmental organizations, international and regional bodies, national institutions and the private sector on how to invest in cultural diversity. Emphasizing the importance of cultural diversity in different areas (languages, education, communication and new media development, and creativity and the marketplace) based on data and examples collected from around the world, the report is also intended for the general public. It proposes a coherent vision of cultural diversity and clarifies how, far from being a threat, it can become beneficial to the action of the international community.
