Advances in Investment Analysis and Portfolio Management (New Series) is an annual publication designed to disseminate developments in the area of investment analysis and portfolio management. The publication is a forum for statistical and quantitative analyses of issues in security analysis, portfolio management, options, futures, and other related issues. The objective is to promote interaction between academic research in finance, economics, and accounting and applied research in the financial community. The chapters in this volume cover a wider range of topics including equity markets, risk return trade-off analysis and portfolio management, and IPOs. In this volume there are 10 chapters, four of them analyze the issues of equity markets: 1. Revisiting U.S. Stock Market Returns: Individual Retirement Accounts; 2. Asset Returns and Monetary Policy in the Emerging Taiwan Financial Markets; 3. On the Intradaily Relationship between Information Revelation and Trade Duration: The Evidence of MSCI Taiwan Stock Index Futures; and 4. Does the Net Flow of Funds Help to Predict the S&P 500 Index? Four of the other six chapters discuss risk return trade-off analysis and portfolio management: 1. An Intertemporal Analysis of Optimal International Asset Allocation; 2. Complexity and the Performance of Investment Portfolios; 3. The Similarity Between Mean-Variance and Mean-Gini: Testing for Equality of Gini Correlations; 4. Estimating Capital Market Parameters: CRSP Versus Yahoo Data. The remaining two papers are related to IPOs: 1. Distinguishing Quality within the IPO Market and 2. Do IPO Firms have Lower Risk? Evidence from IPO Performance in Different States of the World? In sum, this annual publication covers equity markets, IPO, risk return trade-off analysis, and portfolio management. Therefore, the material covered in this publication is not only useful for academicians and but also for practitioners in the area of Finance.

The world of investment is fascinating and, at the same time, enigmatic. The investor's behaviour the world over had oscillated between panic and enthusiasm, guided by the psychological forces of fear and greed. What investment should be held? When should an investment be bought? How long an investment should be held? When is the right time to dispose an investment? How can a profit be made through investments? There is no magic mantra that assures investors on these issues. Only knowledgeable investors can minimize investment-related risks through systematic planning and efficient and effective management of their investments. Investment Analysis and Portfolio Management helps you gain that knowledge. It will be useful to academicians and practitioners and offers a scientific approach to investment management, comprehensive coverage of theory, tools, and techniques of investments, a focus on stock market instruments and is richly illustrated to help understand methods of processing investment information.

This textbook is designed as a core text for finance courses that cover market investments, portfolio formation, and the management of investment portfolios. As such, the text seeks to convey insight and actual wisdom as to the nature of these activities. When combined with a commitment to thinking independently, the text offers the student a rigorous preparation for entry to the funds management industry. The text is presented in three parts. In Part A, the text introduces the fundamental techniques of investment analysis: a "bottom-up" and "top-down" analysis of the firm aimed at an evaluation of the underlying share as a "buy", "hold", or a "sell" recommendation. Part B offers the reader an intuitive grasp of the nature of investment growth, both across time and across assets. Part C introduces the reader to the technicalities of portfolio construction and portfolio management. The text concludes with an assessment of the funds management industry. The text builds in step-by-step stages with illustrative Examples that consolidate the student's progress and understanding through each chapter. Each of parts A, B, and C (above) has sufficient material to justify a separate course. If the student has exposure to a more foundational course in finance, Parts A and B can be covered as a single course. If from other courses, the student is familiar with the essence of Parts A and B and with statistical concepts, the text can be covered as a single course. The text can therefore be presented readily at either an undergraduate or postgraduate level at a pace appropriate to the student's prior exposure to the concepts.

This first Asia-Pacific edition of Reilly/Brown's Investment Analysis and Portfolio Management builds on the authors' strong reputations for combining solid theory with practical application and has been developed especially for courses across the Australia, New Zealand, and Asia-Pacific regions. The real-world illustrations and hands-on activities enhance an already rigorous, empirical approach to topics such as investment instruments, capital markets, behavioural finance, hedge funds, and international investment. The text also emphasises how investment practice and theory are influenced by globalisation.

This research annual publication intends to bring together investment analysis and portfolio theory and their implementation to portfolio management. It seeks theoretical and empirical research manuscripts with high quality in the area of investment and portfolio analysis. The contents will consist of original research on: The principles of portfolio management of equities and fixed-income securities. The evaluation of portfolios (or mutual funds) of common stocks, bonds, international assets, and options. The dynamic process of portfolio management. Strategies of international investments and portfolio management. The applications of useful and important analytical techniques such as mathematics, econometrics, statistics, and computers in the field of investment and portfolio management. Theoretical research related to options and futures. In addition, it also contains articles that present and examine new and important accounting, financial, and economic data for managing and evaluating portfolios of risky assets.
