This reference accords recognition to the recent revolution in macroeconomics wrought by imperfect competition. Grossman and Rogoff (Princeton U.) present chapters by two dozen contributors on two prime areas of research interest: international trade theory and policy (e.g. strategic trade patterns and policies, the relationship between trade and technological progress), and open economy macroeconomics and international finance (covering such topics as exchange rates, foreign lending, and policy coordination). The volume commences with Krugman's overview of the positive theory of international trade, and concludes with analyses of sovereign debt. Annotation copyrighted by Book News, Inc., Portland, OR.
