estimate for the City of Los Angeles is 4,030,904. This estimates out at approximately 8094 persons per square mile. The City of Los Angeles is one of the most diverse cities in the entire world. Angelenos come from throughout the world, speak nearly 200 languages, and represent dozens of different religions. The community members who live, work,

City distribution plays a key role in supporting urban lifestyles, helping to serve and retain industrial and trading activities, and contributing to the competitiveness of regional industry. This book aims to improve knowledge in this area by recognizing and evaluating the problems within the urban freight transport system.

La log ística urbana intel · ligent constitueix un factor crucial en la creaci ó de sistemes de transport urb à eficients i sostenibles. Entre altres factors, aquests sistemes es centren en la incorporaci ó de dades en temps real i en la creaci ó de models de negoci col · laboratiu en el transport urb à de mercaderies, considerant l'augment dels habitants en les ciutats, la creixent complexitat de les demandes dels clients i els mercats altament competitius. Aix ò permet als que planifiquen el transport minimitzar els costos monetaris i ambientals del transport de mercaderies a les àrees metropolitanes. Molts problemes de presa de decisions en aquest context es poden formular com a problemes d'optimaci ó combinat òria. Tot i que hi ha diferents enfocaments de resoluci ó exacta per a trobar solucions òptimes a aquests problemes, la seva complexitat i grand ària, a m é s de la necessitat de prendre decisions instant ànies pel que fa a l'encaminament de vehicles, la programaci ó o la situaci ó d'instal · lacions, fa que aquestes metodologies no s'apliquin a la pr àctica. A causa de la seva capacitat per a trobar solucions pseudo òptimes en gaireb é temps real, els algorismes metaheur ístics reben una atenci ó creixent dels investigadors i professionals com a alternatives eficients i fiables per a resoldre nombrosos problemes d'optimaci ó en la creaci ó de la log ística de les ciutats intel · ligents. Malgrat el seu èxit, les tècniques metaheur ístiques tradicionals no representen plenament la complexitat dels sistemes m é s realistes. En assumir entrades (inputs) i restriccions de problemes deterministes, la incertesa i el dinamisme experimentats en els escenaris de transport urb à queden sense explicar. Els algorismes simheur ístics persegueixen superar aquests inconvenients mitjan çant la integraci ó de qualsevol tipus de simulaci ó en processos metaheur ístics per a explicar la incertesa inherent a la majoria de les aplicacions de la vida real. Aquesta tesi defineix i investiga l' ús d'algorismes simheur ístics com el m ètode m é s adequat per a resoldre problemes d'optimaci ó derivats de la log ística de les ciutats. Alguns algorismes simheur ístics s'apliquen a una s èrie de problemes complexos, com la recollida de residus urbans, els problemes de disseny de la cadena de subministrament integrada i els models de transport innovadors relacionats amb la col · laboraci ó horitzontal entre els socis de la cadena de subministrament. A m é s de les discussions metodol ògiques i la comparaci ó d'algorismes desenvolupats amb els referents de la bibliografia acad èmica, es mostra l'aplicabilitat i l'efici ència dels algorismes simheur ístics en diferents casos de gran escala.

Urban Transport XXI contains the proceedings of the 21st International Conference on Urban Transport and the Environment. The series of annual conferences organised by the Wessex Institute was first held in 1995. Transportation in urban areas, with its related environmental and social impacts, is a topic of significant concern for policymakers in both municipal and central government and for the urban citizens who need effective and efficient transport systems. Urban transport systems require considerable studies to devise and then safeguard their operational use, maintenance and safety. Transportation systems produce significant environmental impacts and can enhance or degrade the quality of life in urban centres. Clearly the challenge of providing effective and efficient transport systems in urban settings remains an acute concern, with financial, political and environmental constraints limiting the ability of transport system planners and operators to deliver the high quality outcomes expected by the public. Papers cover such topics as: Urban Transport Planning and Management; Urban Transport Strategies; Public Transport Systems; Environmental Aspects; Economic and Social Impact; Safety and Security; Travel Behaviour Studies; Customer Satisfaction; Transportation Modelling and Simulation; Infrastructure Development; Intelligent and Advanced Transport Systems; Transportation Integration; City Logistics; Resilience and Inter-modal Transport Systems; Mass Transport Strategies; Social Impacts; Freight Transport; Railway Systems; Transport Governance and Administration; Port and City; Mobility and Public Space; Life Cycle Management.

Il testo è rivolto a studenti, operativi e manager che desiderano approcciare alla logistica in modo pragmatico. L'obiettivo è fornire le competenze di base utili per successivi approfondimenti o per mettere in pratica alcuni strumenti operativi. Le numerose immagini e tabelle forniscono maggiore chiarezza e immediatezza espositiva. Il percorso di presentazione affronta il tema della logistica partendo da considerazioni generali fornendo esempi su alcune catene logistiche e sull'importanza dell'internazionalità. Vengono poi approfonditi temi fondamentali come gli acquisti, il magazzino, la tecnologia e la sostenibilità. Ogni tema viene supportato da citazioni a testi, ricerche e studi scientifici nazionali e internazionali per dare al lettore la possibilità di accedere a un numero maggiore di informazioni e successivi approfondimenti. La copertina del libro vuole graficamente spiegare il ruolo delle strategie logistiche nell'ambito aziendale. Partendo dalle risorse aziendali, applicando idonei strumenti è possibile raggiungere migliori prestazioni in termini di qualità, efficienza, efficacia, puntualità, agilità e precisione. Ultimo ma non ultimo la sostenibilità. Ogni azienda deve, infatti, perseguire a un minore impatto ambientale, obiettivo in grado di fornire un vantaggio competitivo nel medio e lungo termine. Se oggi le aziende vivono le scelte effettuate nel passato, oggi le aziende devono definire le strategie per il futuro.
