Armed with a new weapon, the crew of the Satori risk the voyage to a new world - the home of the Cyanauts, a race of beings enslaved by the Naga for their ability to telepathically translate languages. They hope to free the slaves, depriving the Naga of a powerful tool in the process. But freedom is not so simple as flipping a switch. Trust is earned, and the crew find themselves embroiled in controversy and danger. The Naga are not about to give up their servants without a fight, and would like nothing better than to get their hands on the human starship. The crew of the Satori must decide

for themselves the value of liberty - theirs, the Cyanauts, and that of all humanity lie in the balance.

Blake Starwater is captain of the Starship Perilous. Traveling along with him are the frisky Felioness, Kitty, and the cynical robot, OMBot. Together they soar between the numerous Known Worlds, taking on the jobs that other space crews won't do. The risky jobs. The dangerous jobs. The sometimes less-than-legal jobs. From exploring a derelict space orbital to corporate espionage to meeting a previously unknown alien species -

during their travels they will have to deal with a cavalcade of outrageous characters from across the galaxy as they fight to stay alive and get the job done. They may even meet an ally or two who will join them aboard the . . . Starship Perilous!

This volume provides an in-depth discussion on the central question - how can people express and survive dissent and disagreement in confined habitats in space? The discussion is an important one because it could be that the systems of inter-dependence required to survive in space are so strong that dissent

becomes impossible. John Locke originally said that people have a right to use revolution to overthrow a despotic regime. But if revolution causes violence and damage that causes depressurisation with the risk of killing many people, is it even permissible to have a revolution? How then are people to express their liberty or dissatisfaction with their rulers? The emergence of structures of dissent and disagreement is an essential part of the construction of a framework of liberty in space (revolution is just the extreme example) and thus the topic deserves in-depth and immediate attention. Even today, the way

in which we assemble organisations and corporations for the government and private exploration of space must take into account the need for mechanisms to allow people to express dissent.

Dan Wynn wanted to explore space more than life itself, but a tragic accident left him too injured for NASA's space program. Second chances don't come along every day, so when an old friend offered him one, he grabbed on with both hands. The next thing Dan knew, he was on the moon, piloting humanity's first starship while fighting his way through one

peril after another. Little did Dan know that simple offer was anything but, and would lead him to the stars far beyond our own. The risks are great. But if life knocked you down, what would you gamble to have one more shot at your dreams? Excerpt: "Dan - ad astra!" Dan heard the order. Ad astra. To the stars. It was a toast the two of them had shared back in college, when they first stepped onto the roads which would lead them into space. It had been John's idea to use the toast as a code word now. Dan didn't even take a deep breath before executing the order. He'd practiced this with Majel enough

times in the simulator - not the part about having a gunman in the bridge, but if that order was ever given, it would be a true crisis. He checked the screen again. Visual range in only fifteen seconds. No time for anything else. He rapidly initiated the program, said a quick prayer, and pressed the Enter button on his keyboard. Immediately, the ship began to shudder. This book is a heavily revised second edition of the original volume. The story length has been increased by about 60%, adding enormously more background to the characters and deepening of the personality of the world and

crew. If you've already read the first edition, you won't need to read this version to catch up - but fans of the series are sure to enjoy this expanded and improved "Author's Preferred Edition"!

wormhole drive. Charline Foster, rogue hacker with a brilliant past. Andrew Wakefield, former elite soldier and the son John never had. Together they would embark on a journey that launched humanity into the stars, and face perils that threaten not only their lives, but the future of everyone on Earth.

Jerry Thigpen's study on the history of the Combat Talon is the first effort to tell the story of this wonderfully capable machine. This weapons system has performed virtually every imaginable tactical event in the spectrum of conflict and by any measure is

the most versatile C-130 derivative ever produced. First modified and sent to Southeast Asia (SEA) in 1966 to replace theater unconventional warfare (UW) assets that were limited in both lift capability and speed the Talon I quickly adapted to theater UW tasking including infiltration and resupply and psychological warfare operations into North Vietnam. After spending four years in SEA and maturing into a highly respected UW weapons system the Joint Chief of Staff (JCS) chose the Combat Talon to lead the night low-level raid on the North Vietnamese prison camp at Son Tay. Despite the outcome

of the operation the Talon I cemented its reputation as the weapons system of choice for long-range clandestine operations. In the period following the Vietnam War United States Air Force (USAF) special operations gradually lost its political and financial support which was graphically demonstrated in the failed Desert One mission into Iran. Thanks to congressional supporters like Earl Hutto of Florida and Dan Daniel of Virginia funds for aircraft upgrades and military construction projects materialized to meet the ever-increasing threat to our nation. Under the leadership of such committed hard-

driven officers as Brenci Uttaro Ferkes Meller and Thigpen the crew force became the most disciplined in our Air Force. It was capable of penetrating hostile airspace at night in a low-level mountainous environment covertly to execute any number of unconventional warfare missions.
