Life Cycle Assessment (LCA) has developed in Australia over the past 16 years in a fragmented way with many different people and organizations contributing to the area at different times, and largely through informal or unpublished work. This publication will legitimize and document LCA research and methodology development to act as a record of what has happened and a basis for future development and application of the tool. The Centre for Design at RMIT has been a leading research center in Australia through its work on data collection, methodology development and contribution to knowledge through undertaking LCA studies for leading companies and government departments ranging from products, packaging, buildings, water management and waste management. This work, in addition to key work undertaken by other researchers, will be presented. The book will become a bridge between LCA implementation and life cycle management (LCM) and provide discussion on how LCA development will be in the future and how it integrates with available software tools.

As traditional classroom settings are transitioning to online environments, teachers now face the challenge of using this medium to promote effective learning strategies, especially when teaching older age groups. Because adult learners bring a different set of understandings and skills to education than younger students, such as more job and life experiences, the one-size-fits-all approach to teaching does not work, thus pushing educators to create a student-centered approach for each learner. The Handbook of Research on Student-Centered Strategies in Online Adult Learning Environments is an important resource providing readers with multiple perspectives to approach issues often associated with adult learners in an online environment. This publication highlights current research on topics including, but not limited to, online competency-based education, nontraditional adult learners, virtual classrooms in public universities, and teacher training for online education. This book is a vital reference for online trainers, adult educators, university administrators, researchers, and other academic professionals looking for emerging information on utilizing online classrooms and environments in student-centered adult education.

In the current educational environment, there has been a shift towards online learning as a replacement for the traditional in-person classroom experience. With this new environment comes new technologies, benefits, and challenges for providing courses to students through an entirely digital environment. With this shift comes the necessary research on how to utilize these online courses and how to develop effective online educational materials that fit student needs and encourage student learning, motivation, and success. The optimization of these online tools requires a deeper look into curriculum, instructional design, teaching techniques, and new models for student assessment and evaluation. Information

on how to create valuable online course content, engaging lesson plans for the digital space, and meaningful student activities online are only a few of many current topics of interest for promoting student achievement through online learning. The Research Anthology on Developing Effective Online Learning Courses provides multiple perspectives on how to develop engaging and effective online learning courses in the wake of the rapid digitalization of education. This book includes topics focused on online learners, online course content, effective online instruction strategies, and instructional design for the online environment. This reference work is ideal for curriculum developers, instructional designers, IT consultants, deans, chairs, teachers, administrators, academicians, researchers, and students interested in the latest research on how to create online learning courses that promote student success.

The interactions between human activities and the environment are complicated and often difficult to quantify. In many occasions, judging where the optimal balance should lie among environmental protection, social well-being, economic growth, and technological progress is complex. The use of a systems engineering approach will fill in the gap contributing to how we understand the intricacy by a holistic way and how we generate better sustainable solid waste management practices. This book also aims to advance interdisciplinary understanding of intertwined facets between policy and technology relevant to solid waste management issues interrelated to climate change, land use, economic growth, environmental pollution, industrial ecology, and population dynamics.

Indigenous knowledge systems (IKS) are a combination of knowledge systems encompassing technology; social, economic, and philosophical learning; or educational, legal, and governance systems. The lack of documentation of these systems presents a problem as the knowledge is fading away over time. In response, it is essential that policies and strategies are undertaken to ensure that these systems are protected and sustained for generations to come. The Handbook of Research on Protecting and Managing Global Indigenous Knowledge Systems is a comprehensive reference source that works to preserve indigenous knowledge systems through research. Focusing on key concepts such as tools of indigenous knowledge management and African indigenous symbols, the book preserves and promotes indigenous knowledge through research and fills the void staff and students within the field of indigenous knowledge systems face with the current lack of research and resources. This book is ideal for university students, lecturers, researchers, academicians, policymakers, historians, sociologists, and anyone interested in the field of indigenous knowledge systems.
