"Local Code is a prescription for urban health."-Elizabeth Plater-Zyberk, Architectural Record

This book describes an astounding feat of constitutional writing and publication. For a number of decades, officials working across different branches of the United Kingdom (UK) constitution have been engaged in a series of separate projects. Taken in their totality, they amount to a vast enterprise. Yet, until now, no-one has fully recognised or critically analysed what has taken place. There has been a proliferation in the UK of publicly available codes, normally lacking a basis in statute, providing official accounts of a variety of different features of UK constitutional rules and principles. They cover institutions ranging from the Cabinet to the Civil Service to the judiciary, and relationships between entities such as central government and the devolved executives; and between the UK executive and the Westminster Parliament. Among them are prominent texts such as the Ministerial Code, the Cabinet Manual, the Guide to Judicial Conduct and the devolution Memorandum of Understanding - as well as more obscure documents that nonetheless contain important stipulations regarding the operation of the system. Similar developments have taken place in countries including Australia, Canada and New Zealand. The author explores the history of this phenomenon in the UK, how it functions today here and elsewhere in the Commonwealth, and its implications for the UK constitution.

The Maryland State Constitution is the only comprehensive analysis of Maryland's constitution. Dan Friedman provides an outstanding historical account of the state's governing charter along with an in-depth, section-by-section analysis of the entire constitution, detailing the many significant changes that have been made since its initial drafting in 1867. In-depth commentary on the constitutional interpretation offers tremendous political and economic insight into each of the constitution's provisions. Previously published by Greenwood, this title has been brought back in to circulation by Oxford University Press with new verve. Re-printed with standardization of content organization in order to facilitate research across the series, this title, as with all titles in the series, is set to join the dynamic revision cycle of The Oxford Commentaries on the State Constitutions of the United States. The Oxford Commentaries on the State Constitutions of the United States is an important series that reflects a renewed international interest in constitutional history and provides expert insight into each of the 50 state constitutions. Each volume in this innovative series contains a historical overview of the state's constitutional development, a section-by-section analysis of its current constitution, and a comprehensive guide to further research. Under the expert editorship of Professor G. Alan Tarr, Director of the Center on State Constitutional Studies at Rutgers University, this series provides essential reference tools for understanding state constitutional law. Books in the series can be purchased individually or as part of a complete set, giving readers unmatched access to these important political documents.

Underwood (law, U. of South Carolina) continues his exploration of the historical development of the allocation of power under the Constitution of South Carolina. This volume traces the evolution of local government power and its relationship to the state government from early colonial to contemporary times. It examines the primitive origins of local government, and also abortive attempts to reform the historically fragmented approach to local government. Since its original publication in 1999, this foundational book has become a classic in its field. This second edition, Code Version 2.0, updates the work and was prepared in part through a wiki, a web site allowing readers to edit the text, making this the first reader-edited revision of a popular book. Code counters the common belief that cyberspace cannot be controlled or censored. To the contrary, under the influence of commerce, cyberspace is becoming a highly regulable world where behavior will be much more tightly controlled than in real space. We can - we must - choose what kind of cyberspace we want and what freedoms it will guarantee. These choices are all about architecture: what kind of code will govern cyberspace, and who will control it. In this realm, code is the most significant form of law and it is up to lawyers, policymakers, and especially average citizens to decide what values that code embodies.
