The Making of Modern Britain and A History of Modern Britain by Andrew Marr provide, in my opinion, the best general history of Britain in the 20th century. Each book covers political, economic and social history written in Marr's unique style; you can almost hear Marr's voice reading the history to you as you peruse the paragraphs and prose within them.

In 1797, in what is now the Czech Republic, Pin as Hurwitz published one of the best-selling Hebrew books of the modern era. Nominally an extended commentary on a sixteenth-century kabbalist text, The Book of the Covenant was in fact a compendium of scientific knowledge and a manual of moral behavior. Its popularity stemmed from its ability to present the scientific advances and moral cosmopolitanism of its day in the context of Jewish legal and mystical tradition. Describing the latest developments in science and philosophy in the sacred language of Hebrew, Hurwitz argued that an intellectual

understanding of the cosmos was not at odds with but actually key to achieving spiritual attainment. In *A Best-Selling Hebrew Book of the Modern Era*, David B. Ruderman offers a literary and intellectual history of Hurwitz's book and its legacy. Hurwitz not only wrote the book, but was instrumental in selling it as well and his success ultimately led to the publication of more than forty editions in Hebrew, Ladino, and Yiddish. Ruderman provides a multidimensional picture of the book and the intellectual tradition it helped to inaugurate. Complicating accounts that consider modern Jewish thought to be the product of a radical break from a religious, mystical past, Ruderman shows how, instead, a complex continuity shaped Jewish society's confrontation with modernity.

This comprehensive and balanced history of the world in the twentieth century and into the new millennium chronicles the key events of the period and examines the underlying issues that have shaped the times. *CONTEMPORARY WORLD HISTORY, 6th Edition*, takes a global approach to the subject while doing justice to the distinctive character of individual civilizations and regions. Author William Duiker integrates political, economic, social, and cultural history, creating a chronologically ordered synthesis that gives students the true flavor of the most decisive moments in recent world history. In addition, Duiker's own photographs and selection of primary source documents are especially effective in illustrating key points in the narrative. The popular *Film & History* feature examines several films, presenting a brief analysis of each film's plot as well as its historical significance, value, and accuracy. As modern foreign policy and international relations encompass more and more scientific issues, we are moving towards a new type of diplomacy, known as "Science Diplomacy". Will this new diplomacy of the 21st century prove to be more effective than past diplomacy for the big issues facing the world, such as climate change, food and water insecurity, diminishing biodiversity, pandemic disease, public health, genomics or environmental collapse, mineral exploitation, health and international scientific endeavours such as those in the space and the Antarctic? Providing a new area of academic focus that has only gathered momentum in the last few years, this book considers these questions by bringing together a distinguished team of international specialists to look at various facets of how diplomacy and science are influenced by each other. The book not only dissects the ways that politics, science and diplomacy have become intertwined, but also highlights how the world's seemingly most intractable problems can be tackled with international collaboration and diplomacy that is rooted in science, and driven by technology. It, therefore, challenges the conventional wisdom concerning the juxtaposition of science and the world of diplomacy.

While there is talk of the Fourth Industrial Revolution, old and new challenges bedevil the world - climate change, nutrition, and health poverty being at the top of the list. In seeking solutions to these and other problems which afflict the modern era, it is worthwhile to look into our collective past, to the traditions and knowledges of our ancestors. Such knowledge continues to exist in many parts of the world, though now marginalized by homogenous, Eurocentric ontology and epistemology. This book presents a compilation of reviews, case studies, and primary research attempting to locate the utility of traditional and Indigenous Knowledges in an increasingly complex world. It assembles chapter authors from across the world to tackle topics ranging from traditional knowledge-based innovations and commercialization, traditional medicine systems as practiced around the world, ethnoveterinary practices, and food innovation to traditional governance and leadership systems, among others. This book is an important resource for policymakers; scholars and researchers of cultural studies, leadership, governance, ethnobotany, anthropology, plant genetic resources and technology innovation; and readers interested in the history of knowledge and culture, as well as cultural activists and political

This book is the fourth volume in the definitive series, *The History of the Study of Landforms or The Development of Geomorphology*. Volume 1 (1964) dealt with contributions to the field up to 1890. Volume 2 (1973) dealt with the concepts and contributions of William Morris Davis. Volume 3 (1991) covered historical and regional themes during the 'classic' period of geomorphology, between 1980 and 1950. This volume concentrates on studies of geomorphological processes and Quaternary geomorphology, carrying on these themes into the second part of the twentieth century, since when process-based studies have become so dominant. It is divided into five sections. After chapters dealing with geological controls, there are three sections dealing with process and form: fluvial, glacial and other process domains. The final section covers the mid-century revolution, anticipating the onset of quantitative studies and dating techniques. The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of contemporary geomorphology. The volume is in part a celebration of the late Professor Richard Chorley, who devised its structure and contributed a chapter.

The early 17th century was a time of great literature the era of Cervantes and Shakespeare but also of international tension and heightened diplomacy. This book looks at the relations between Spain under Philip III and Philip IV and England under James I in the period 1603–1625. It examines the essential issues that established the framework for diplomatic relations between the two states, looking not only at questions of war and peace, but also of trade and piracy. Óscar Alfredo Ruiz Fernández expertly argues that the diplomatic relationship was vital to the strategic interests of both powers and also played a highly significant role in the domestic agendas of each country. Based on Spanish and English archival sources, *England and Spain in the Early Modern Era* provides, for the first time, a clear picture of diplomacy between England and Spain in the early modern era.
