I have bought this book for my 5yo twin daughters which started the reception this school year. This exercise book covers the subtraction of numbers 1 to 5 within 20 range (i.e. you go from 2-1 to 20-5). First pages are ridiculously simple, but then after, I think, first 10 pages things go quite difficult.

to it. We collect new-and-improved ideas, but don't prune the outdated ones. Every day, across challenges big and small, we neglect a basic way to make things better: we don't subtract. Leidy Klotz's pioneering research shows why. Whether we're building Lego models or cities, grilled-cheese sandwiches or strategic plans, our minds tend to add before taking away. Even when we do think of it, subtraction can be harder to pull off because an array of biological, cultural, and economic forces push us towards more. But we have a choice—our blind spot need not go on taking its toll on our cities, our institutions, and our minds. By diagnosing our neglect of subtraction, we can treat it. Subtract will change how you change your world. In these pages you'll meet subtracting exemplars: design geniuses, Nobel Prize-winners, rock-stars, and everyday heroes, who have subtracted to dismantle racism, advance knowledge, heal the planet, and even tell better jokes. These and more guiding lights show how we can revolutionize not just our day-to-day lives, but our collective legacy. More or less. A paradigm shift of a book, Subtract shows us how to find more of the options we've been missing—and empowers us to pursue them.
