This book is a guide to families and genera of soft corals and sea fans from the shallow, tropical and subtropical regions of the Indian and Central-West Pacific oceans and the Red Sea. Soft corals and sea fans are common names for species of animals grouped under the scientific name Alcyonacea. Together with blue coral and sea pens, they make up a larger animal group called Octocorallia (Box 1). Their distinguishing characteristic is that their polyps always bear eight tentacles (hence octo-coral), which

Ryder, and Roger Fouts--to challenge and change exploitative practices. As concern for animals and their welfare grows, this volume will be an indispensable aid to general readers, activists, scholars, and students interested in developing a keener awareness of cruelty to animals and considering avenues for reform. Also included is a special foreword by Archbishop Desmond Tutu, urging readers to seek justice and protection for all creatures, humans and animals alike.
