John Weir Perry (1914-1998) first met C. G. Jung in Switzerland as a young medical student, where he was intrigued by Jung's assertion that schizophrenia is a natural healing process. During the 1970s, he founded an experimental residential facility called Diabasis in Berkeley, California, designed as a supportive home for young adults who were experiencing the initial days of their first "acute schizophrenic break." At Diabasis, these full-blown "schizophrenics" were able to emerge "on the far side of madness," as Perry put it, "weller than well," without any treatment by medication, electroshock, or locked doors. When "The Far Side of Madness" was first published in 1974, Perry's deep insight into the nature of so-called "schizophrenia" opened the way for a radically new, more compassionate approach to this condition. This pioneering work of Jungian psychiatry reframes acute psychotic episodes in the context of visionary experience of schizophrenic patients and describes innovative methods of handling them.

Renowned for exploring the social implications of modern technology, Howard Rheingold has been dubbed by MIT "the first citizen of the Internet." In this collection of funny, prescient, thought-provoking essays, originally published during the 1970s and 1980s, he offers a glimpse into the changes wrought during that explosive period. From the effects of the graphic user interface (GUI) not only on how we work but how we think, to "technarchist" movements that presaged both the hacker mentality and the anarchist idealism of Burning Man today, to a ground-floor view of the very earliest of what Rheingold was the first to dub virtual communities, his Excursions run the gamut from the silly to the profound. These essays remain fascinating, amusing, and relevant. "Most of my work in recent decades," Rheingold says, "has focused on the consequences of digital media and networked publics. Before the digital wave came along, I wrote about a more diverse range of subjects: What causes anger? What ' s it like to be in a car crash? What ' s insect sex like? Do invisible airborne chemicals affect behavior? Can we control our dreams? How will people get high in the future? Will money evolve into new forms? In the second decade of the twenty-first century, these short pieces re-present my explorations during my think about anything years to a wider public who may be familiar with my work on digital culture."
