Winner of a Shingo Research and Professional Publication Award What can we do to make more people productively useful? Striving to answer that question more than 60 years ago sparked the development of the most powerful training methodology that has impacted U.S. industry -- Training Within Industry (TWI). During World War II, major production increases were demanded by the U.S. military - TWI, which trains supervisors, was developed comprising three separate programs: Job Instruction--how to instruct employees so they can quickly remember to do a job, correctly, safely, and conscientiously Job Methods--how to improve methods for producing greater quantities of quality products in less time by effectively using available workforce, machines, and materials Job relations--how to lead employees so that problems are prevented and analytical methods are used to effectively resolve problems Toyota was the earliest company to adopt TWI after World War II, and this methodology planted the seeds for the development of the Toyota Production System -- the gold standard of manufacturing excellence. In The TWI Workbook: Essential Skills for Supervisors, Patrick Graupp and Robert Wrona teach supervisors how to apply a four-step method for each of the three respective programs with numerous examples and exercises. In these exercises, supervisors will participate in hands-on application of the four-step method to actual jobs and employee problems from their own worksites. In addition, a CD companion includes blank forms needed to complete the exercises and implementation case studies.

This practical and informative text demonstrates the importance of the relationship between a physically lean enterprise and accounting. It argues that to have continued success in an increasingly competitive marketplace, businesses must streamline both their physical operations and accounting methods.

Every Haynes manual is based on a complete teardown and rebuild, contains hundreds of "hands-on" photos tied to step-by-step instructions, and is thorough enough to help anyone from a do-it-your-selfer to a professional.

More than 100,000 entrepreneurs rely on this book for detailed, step-by-step instructions on building successful, scalable, profitable startups. The National Science Foundation pays hundreds of startup teams each year to follow the process outlined in the book, and it's taught at Stanford, Berkeley, Columbia and more than 100 other leading universities worldwide. Why? The Startup Owner's Manual guides you, step-by-step, as you put the Customer Development process to work. This method was created by renowned Silicon Valley startup expert Steve Blank, co-creator with Eric Ries of the "Lean Startup" movement and tested and refined by him for more than a decade. This 608-page how-to guide includes over 100 charts, graphs, and diagrams, plus 77 valuable checklists that guide you as you drive your company toward profitability. It will help you: • Avoid the 9 deadly sins that destroy startups' chances for success • Use the Customer Development method to bring your business idea to life • Incorporate the Business Model Canvas as the organizing principle for startup hypotheses • Identify your customers and determine how to "get, keep and grow" customers profitably • Compute how you'll drive your startup to repeatable, scalable profits. The Startup Owner's Manual was originally published by K&S Ranch Publishing Inc. and is now available from Wiley. The cover, design, and content are the same as the prior release and should not be considered a new or updated product.

For well-experienced lawyers, the Federal Civil Procedure Manual provides a comprehensive treatment of procedural law in federal courts that an attorney can rely on for quick answers to discrete issues. For new attorneys, the Manual provides a complete blueprint for commencing and working through a case in court. The copious and very recent case-law updating provides authoritative sources that go into great detail about the designated issues. The authors have nearly 50 years' experience in developing, crafting, and approving amendments to the Civil Rules. They were intimately involved with the amendment process for virtually all the Civil Rules. Their combined experience brings unmatched insights into the Civil Rules. The Federal Civil Procedure Manual addresses not only procedural law but it also contains extensive discussion of jurisdictional matters. The chapters on arbitration, as an alternative dispute procedure, are typically not addressed in a procedural book.

Industries have had to quickly and continuously adjust their strategies in recent years to remain relevant and desirable. The automotive industry in particular has grown exponentially since its inception. In order for this industry to

evolve with the changing times and appropriately utilize emerging technologies, further study on the new models and practices within the manufacturing process is required. Examining a New Automobile Global Manufacturing System considers emerging automobile manufacturing practices for the strengthening of automobile corporate management in advanced companies and discusses key changes within corporate management strategies and management technology for the automotive industry. Covering a range of critical topics such as production systems, teaching strategies, and design models, this reference work is ideal for manufacturers, managers, researchers, scholars, practitioners, academicians, instructors, and students.

New JIT, New Management Technology Principle contains the previously published, updated, and new works of renowned scientist, scholar, and consultant Kakuro Amasaka. This book details the Just-in-Time (JIT) quality management strategy, exploring the cutting edge of a new management technology principle that surpasses what traditional JIT has accomplished. The new JIT principle contains hardware and software systems, and next-generation technical principles for transforming management technology into management strategy. This comprehensive work covers traditional JIT, innovation and evolution, the full new JIT and its applications, along with case studies. It is clearly impossible to lead the next generation by merely maintaining the two Toyota management technology principles, Toyota Production System and Total Quality Management. To overcome this issue, it is essential to renovate not only TPS, which is the core principle of the production process, but also establish core principles for marketing, design and development, production, and other departments. This book reassesses the way management technology was carried out in the manufacturing industry and establishes new JIT. This next-generation management technology model is the JIT system for not only manufacturing, but also for customer relations, sales and marketing, product planning, research and development (R&D), product design, production engineering, logistics, procurement, and administration and management for enhancing business process innovation and introduction of new concepts and procedures. The book focuses on the theory and application of strategic management technology through the application of new JIT, then demonstrates its effectiveness in a case study based on an advanced car manufacturer. Using this new model, you can realize manufacturing that places top priority on customers with a good Quality, Cost, and Delivery (QCD) in a rapidly changing technical environment, and allows you to create uniform quality for the global market.

Topological Modelling of Nanostructures and Extended Systems completes and expands upon the previously published title within this series: The Mathematics and Topology of Fullerenes (Vol. 4, 2011) by gathering the latest research and advances in materials science at nanoscale. It introduces a new speculative area and novel concepts like topochemical reactions and colored reactive topological indices and provides a better understanding of the physical-chemical behaviors of extended systems. Moreover, a charming new family of space-filling fullerene crystals is here analyzed for the first time. Particular attention is given to the fundamental influences exercised by long-range connectivity topological mechanisms on the chemical and physical properties of carbon nanostructures. Systems consisting in graphenic layers with structural and topological defects are investigated in their electronic and magnetic behaviors also in presence of metallic particles. More specifically, the book focuses on: - Electronic Properties of low dimensional nanostructures including negatively-curved carbon surfaces; Pariser-Parr-Pople model hamiltonian approach to graphene studies; - Topochemistry and Toporeactivity of extended sp²-nanocarbons: PAH, fullerenes, nanoribbons, Moebius-like nanoribbons, nanotubes and grapheme; - Novel class of crystal networks arising from spanning fullerenes; - Nanostructures and eigenvectors of matrices and an extended treatise of topological invariants; - Enumeration hetero-fullerenes by Polya theory. Topological Modelling of Nanostructures and Extended Systems represents a valuable resource to advances graduates and researchers working in mathematics, chemistry, physics and material science.

In this book, author Sadao Nomura taps into his decades of experience leading and advising Toyota operations in a wide variety of operations to tell the story of radical improvement at Toyota Logistics & Forklift (TL&F). This book tells in great detail what the author did with TL&F, how they did it, and the dramatic results that ensued. TL&F has long been a global leader in its industry. TL&F is part of Toyota Industries Corporation, which was founded by Toyota Group founder Sakichi Toyoda almost 100 years ago. Sakichi Toyoda is legendary in the Lean community as the originator of the all-important "JIDOKA" pillar of TPS, which ensures 1) built-in quality and 2) respect for people through ensuring that technology works for people rather than the other way around. Although TL&F seemed to be performing well, insiders knew that, as the founding company of the Toyota group, it needed to do better, especially in the quality performance of its global subsidiary operations. But improvement would not be easy in a company that already prided itself in its history as an exemplar in providing highest quality products and services. In 2006, TL&F requested assistance from Sadao Nomura. The initial request was for Mr. Nomura to support quality improvement in three global operations that had become part of TL&F through acquisition: US, Sweden, and France. Improvement was expected at these affiliates, but the dramatic nature of the improvement was not. Further, the improvement activities were so powerful that they were also instituted at the parent operations in Japan. Over a period of almost ten years, the company with the name most associated with product quality experienced quality improvement unparalleled in its history. "Dantotsu" means "extreme," "radical," or "unparalleled."
