It is now widely recognised that professional presentation skills are an indispensable cornerstone of a successful scientific career. This updated second edition provides a concise and accessible guide to preparing and delivering scientific presentations. Its highly practical 'how-to' style focuses on the issues that are of immediate concern to the busy scientist. The text covers all of the important aspects of scientific presentations, including knowing your audience, producing visual material, controlling nerves and handling questions. It also includes advice on presenting in English for non-native speakers, helping them to improve the clarity and effectiveness of their presentations. Links are included throughout the text to the accompanying website, which contains annotated video clips of speakers delivering a talk and demonstrates the common problems encountered, as well as exercises designed to overcome them. It also contains image files to demonstrate the design issues to consider when creating visual material.

This book provides concise and effective tips spanning all relevant areas to deliver engaging scientific presentations. Readers will strengthen their skills in preparing, practicing and delivering presentations at both physical and virtual conferences and seminars. Best practices for structuring presentations and elements to include

and those to exclude such as detailed sections on the use of videos, animations and tables are included. Common errors often seen in scientific presentations are highlighted along with tips on how to interact with audiences and keep them engaged. This will be a valuable resource for scientists in all areas of chemistry and materials science as well as engineers who wish to elevate their scientific presentations.

Check out the author's website at www.scientific-presentations.com This book looks at the presenting scientist from a novel angle: the presenter-host. When scientists give a talk, the audience (“guests”) expects the title of the talk to determine presentation content, they require understandable slides, and they demand visible and audible scientific authority. To each expectation corresponds a set of skills: personal (voice, host qualities, time control), technical (presentation tools and slide design), and scientific (Q&A, slide content). The author takes an original human factor view of the presentation delivery, in which the audience is easily distracted, rapidly forgetful, and increasingly impatient. Thus, insightful pointers are given on how to deliver the talk, how to craft the slides, and how to prevent the computer from rendering the presenting host-scientist into a “ghost”. In addition, the book goes in-depth

over the treatment of questions by examining the motives and style of the questioners, and advising on how best to answer to each type of questioner. The book comes with a DVD for audio and video examples, and includes essential PowerPoint and Keynote techniques that a presenter cannot live without. Contents: "Content Selection: "Paper and Oral Presentation: The Difference Content Filtering Criteria" Audience Expectations: "General Audience Expectations Scientific Audience Expectations" The Slides: "Five Slide Types, Five Roles Slide Design" The Presenter: "The Master of Tools Scientist and Perfect Host The Grabbing Voice The Answerable Scientist Readership: Students, graduates, postgraduates, and professionals seeking help in improving their scientific presentation skills.

This timely and hugely practical work provides a score of examples from contemporary and historical scientific presentations to show clearly what makes an oral presentation effective. It considers presentations made to persuade an audience to adopt some course of action (such as funding a proposal) as well as presentations made to communicate information, and it considers these from four perspectives: speech, structure, visual aids, and delivery. It also discusses computer-based projections and slide shows as well as overhead projections. In particular, it looks at ways of organizing

graphics and text in projected images and of using layout and design to present the information efficiently and effectively.

A Handbook of Public Speaking for Scientists and Engineers helps scientists and engineers improve their skills at speaking in public in the course of their professional activities. The book shows how best to prepare papers for presentation at a technical conference and how to put cases to committee meetings. Not only does the book deal with specific events, but it also provides the techniques of more effective speaking, whether presenting papers, answering questions, or speaking "off-the-cuff." The book is written in a highly entertaining manner and should put all complacent lecturers on their guard. This is essential reading for every scientist and engineer called upon to speak in public on technical matters.

Electronic publishing and electronic means of text and data presentation have changed enormously since the first edition was first published in 1997. This second edition applies traditional principles to today's, modern techniques. In addition to substantial changes on the poster presentations and visual aids chapters, the chapter on proposal writing discusses in more detail grant writing proposals. A new chapter has also been dedicated to international students studying

"Research" and "Publishing" are phrases familiar to all neurosurgeons and neuroscientists. Many young neurosurgeons struggle with them on a trial-and-error basis at first, and there are not structured education programs providing information on standard methods. The European Association of Neurosurgical Societies Research Committee has developed a course on research and publication methods for residents in neurosurgery who have not yet completed training. This supplement includes selected contributions from this course and will serve as an essential handbook providing basic tools to guide research and publication work, presenting time-saving advice, and resulting in the most beneficial contributions in experimental and clinical research.

Imagine you are a scientist faced with presenting your research clearly and concisely. Where would you go for help? This book provides

the answer. It shows how to use story structure to craft clear, credible presentations. In it you will find exercises to help you give both short and long presentations. Elevator pitches, lightning talks, Three Minute Thesis (3MT®), and conference presentations are all covered as are suggestions for longer presentations. Separate chapters address good poster design, how to tailor your talk to an audience, and presentation skills. Throughout the book the focus is on creating surprising, memorable stories. Scientific presentations are true stories about new discoveries. They are surprising because every new discovery changes our understanding of the world, and memorable because they move audiences. With light-hearted illustrations by Jon Wagner this book will appeal to researchers and graduate students in all areas of science, and other disciplines too.

Public speaking is an essential component in the life of a scientist, whatever your level of career. In this book, the authors describe a tried-and-tested technique for preparing a presentation: the SELL Method. Following these three simple steps - Skeleton, Envelope, Life & Logistics - will help you make the most out of any talk. Whether it be a 3-minute pitch or an hour-long plenary session, you will find pages of advice, theory and practical exercises enabling you to SELL YOUR RESEARCH with impact. For scientists these days, the work is not

done until it is communicated. And now that problem is solved. Solidly researched and immaculately written, *Sell Your Research* is a goldmine of useful advice. Whether you are brimming with confidence or just setting out, this gem of a guidebook will improve every presentation and nurture every budding science communicator. Dr. Stephen Webster, Director of Science Communication Unit, Imperial College London Public speaking is one of the most intimidating but crucial tasks in a scientist's career. This book provides a welcoming, clear, step-by-step guide to improving your presentations at every level. Reading it and following its advice will make your science talks less frightening and more enjoyable. Dr. Laura Helmuth, Health, Science & Environment Editor, Washington Post
