Oversized wet wells in wastewater pumping stations lead to the accumulation of grit, sludge and floatable materials. Trench-type wet wells in compliance with ANSI/Hi 9.8, the American National Standard for Pump Intake Design, minimize wet well volume and facilitate wet well cleaning through periodic pump down operations.

PUMPING STATION MODIFICATIONS TO COMPLY WITH ANSI/Hi 9.8 ...

The basic design requirements include adequate depth of flow to limit velocities in the pump bays, reduction of the potential formulation of surface vortices and adequate pump bay width to limit the maximum pump approach velocities. The pump bay width should be narrow and long enough to channel uniform flow toward the pumps.
