Considered Teffi's single greatest work, Memories: From Moscow to the Black Sea is a deeply personal account of the author's last months in Russia and Ukraine, suffused with her acute awareness of the political currents churning around her, many of which have now resurfaced. In 1918, in the immediate aftermath of the Russian Revolution, Teffi, whose stories and journalism had made her a celebrity in Moscow, was invited to read from her work in Ukraine. She accepted the invitation eagerly, though she had every intention of returning home. As it happened, her trip ended four years later in Paris, where she would spend the rest of her life in exile. None of this was foreseeable when she arrived in German-occupied Kiev to discover a hotbed of artistic energy and experimentation. When Kiev fell several months later to Ukrainian nationalists, Teffi fled south to Odessa, then on to the port of Novorossiysk, from which she embarked at last for Constantinople. Danger and death threaten throughout Memories, even as the book displays the brilliant style, keen eye, comic gift, and deep feeling that have made Teffi one of the most beloved of twentieth-century Russian writers.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.
