The Oxford Textbook of Palliative Social Work is a comprehensive, evidence-informed text that addresses the needs of professionals who provide interdisciplinary, culturally sensitive, biopsychosocial-spiritual care for patients and families living with life-threatening illness. Social workers from diverse settings will benefit from its international scope and wealth of patient and family narratives. Unique to this scholarly text is its emphasis on the collaborative nature inherent in palliative care. This definitive resource is edited by two leading palliative social work pioneers who bring together an array of international authors who provide clinicians, researchers, policy-makers, and academics with a broad range of content to enrich the guidelines recommended by the National Consensus Project for Quality Palliative Care.

The Closing of the American Mind, a publishing phenomenon in hardcover, is now a paperback literary event. In this acclaimed number one national best-seller, one of our country's most distinguished political philosophers argues that the social/political crisis of 20th-century America is really an intellectual crisis. Allan Bloom's sweeping analysis is essential to understanding America today. It has fired the imagination of a public ripe for change.

Data sharing can accelerate new discoveries by avoiding duplicative trials, stimulating new ideas for research, and enabling the maximal scientific knowledge and benefits to be gained from the efforts of clinical trial participants and investigators. At the same time, sharing clinical trial data presents risks, burdens, and challenges. These include the need to protect the privacy and honor the consent of clinical trial participants; safeguard the legitimate economic interests of sponsors; and guard against invalid secondary analyses, which could undermine trust in clinical trials or otherwise harm public health. Sharing Clinical Trial Data presents activities and strategies for the responsible sharing of clinical trial data. With the goal of increasing scientific knowledge to lead to better therapies for patients, this book identifies guiding principles and makes recommendations to maximize the benefits and minimize risks. This report offers guidance on the types of clinical trial data available at different points in the process, the points in the process at which each type of data should be shared, methods for sharing data, what groups should have access to data, and future knowledge and infrastructure needs. Responsible sharing of clinical trial data will allow other investigators to replicate published findings and carry out additional analyses, strengthen the evidence base for regulatory and clinical decisions, and increase the scientific knowledge gained from investments by the funders of clinical trials. The recommendations of Sharing Clinical Trial Data will be useful both now and well into the future as improved sharing of data leads to a stronger evidence base for treatment. This book will be of interest to stakeholders across the spectrum of research—from funders, to researchers, to journals, to physicians, and ultimately, to patients.

Meeting Health Information Needs Outside of Healthcare addresses the challenges and ethical dilemmas concerning the delivery of health information to the general public in a variety of non-clinical settings, both in-person and via information technology, in settings from public and academic libraries to online communities and traditional and social media channels. Professionals working in a range of fields, including librarianship, computer science and health information technology, journalism, and health communication can be involved in providing consumer health information, or health information targeting laypeople. This volume clearly examines the properties of health information that make it particularly challenging information to provide in diverse settings. Addresses professional challenges and ethical problems of communicating health information to lay people in non-clinical settings Focuses on health information as a challenge for different professionals providing health information in different settings Emphasizes the shared challenges of information practice across different settings as well as those facing professionals in different roles

This text aims to be a one-stop source for guidance and checking the rules for proper conduct of clinical trials, as well as providing a historical perspective of the clinical research landscape. Good Clinical Practice guidelines provide an international quality standard for the regulation of clinical trials. They include standards on how clinical trials should be conducted, provide assurance of safety and efficacy of newly developed drugs and protect human rights. Principles of Good Clinical Practice describes the ethical principles and regulatory requirements that influence the current and future conduct of clinical research. As well as providing essential information on clinical trial design and pharmacovigilance, coverage also includes: informed consent; investigator and sponsor responsibilities; site monitoring; institutional review boards and dependent ethics committees; clinical trial registration and reporting; quality assurance; and future implications for good clinical practices. Principles of Good Clinical Practice will be a definitive text for Clinical Development personnel at pharmaceutical companies, Contract Research Organizations (CROs), PharmD and postgraduate pharmacy students, and medical, pharmacy and drug company libraries

This book is devoted to scholarship in the field of self-directed learning in the 21st century, with specific reference to higher education. The target audience of the book includes scholars in the field of self-directed learning and higher education. The book contributes to the discourse on the quality of education in the 21st century and adds to the body of scholarship in terms of self-directed learning, and specifically its role in higher education. Although all the chapters in the book directly address self-directed learning, the different foci and viewpoints raised make the book a rich knowledge bank of work on self-directed learning.

"Reeve's book is an excellent companion to Plato's Apology and a valuable discussion of many of the main issues that arise in the early dialogues. Reeve is an extremely careful reader of texts, and his familiarity with the legal and cultural background of Socrates' trial allows him to correct many common misunderstandings of that event. In addition, he integrates his reading of the apology with a sophisticated discussion of Socrates' philosophy. The writing is clear and succinct, and the research is informed by a thorough acquaintance with the secondary literature. Reeve's book will be accessible to any serious undergraduate, but it is also a work that will have to be taken into account by every scholar doing advanced research on Socrates." —Richard Kraut, Northwestern University

Lifelong learning and education is a key concept for the development of adult education as an area of practice and theoretical consideration. In recent decades, meanwhile, the idea of lifelong education and learning has been central to the guidance of various international organisations of many countries.

The considerable increase in numbers of students required to complete undergraduate dissertations as part of their curricula demonstrates a clear need for supporting academic staff from a wide variety of disciplines in this area. There has been limited research published in the realm of undergraduate supervision. Therefore, supervision of academic dissertations in an undergraduate setting still remains to be addressed in a comprehensive manner. The overarching theme of this reference work is the convergence of shared understandings, strategies and reflections of undergraduate supervisors from around the world, from many different subject disciplines. There is also a need today for a mapping of the current landscape of undergraduate supervision. This text is presented through a series of case studies from a wide variety of subject disciplines in the sciences and arts and is enlightened by research perspectives; it comprises of a focus on development needs for supervisors of undergraduate students, using updated information, modelling exercises and interaction in the form of a series of individual activities, along with a selection geared at programme team development in preparing supervisors for their role, choice key readings, and exploration of online resources. This eBook is intended as a guide for academic staff across various disciplines who are involved with dissertation supervision. It is valuable to those in the early stages of their career who may be supervising for the first time; equally, it provides support, guidance and affirmation to those who have supervised over a number of years.
