This book makes two central claims: first, that mineral-rich states are cursed not by their wealth but, rather, by the ownership structure they choose to manage their mineral wealth and second, that weak institutions are not inevitable in mineral-rich states. Each represents a significant departure from the conventional resource curse literature, which has treated ownership structure as a constant across time and space and has presumed that mineral-rich countries are incapable of either building or sustaining strong institutions - particularly fiscal regimes. The experience of the five petroleum-rich Soviet successor states (Azerbaijan, Kazakhstan, the Russian Federation, Turkmenistan, and Uzbekistan) provides a clear challenge to both of these assumptions. Their respective developmental trajectories since independence demonstrate not only that ownership structure can vary even across countries that share the same institutional legacy but also that this variation helps to explain the divergence in their subsequent fiscal regimes.

Many environmental problems cross national boundaries and can be addressed only through international cooperation. In this book Robert Darst examines transnational efforts to promote environmental protection in the USSR and in five of its successor states—Russia, Ukraine, and the Baltic republics of Estonia, Latvia, and Lithuania—from the late 1960s to the present. The core of the book is a comparative study of three key issues: nuclear power safety, transboundary air pollution, and Baltic Sea pollution. Although expectations were high that the end of the Cold War and the breakup of the Soviet Union would lead to increased East-West environmental cooperation, the opposite has been true. Russia and the other successor states have generally agreed to address such problems only when paid to do so. Darst finds that post-Cold War environmental cooperation has been most successful when there is an overlap between the environmental and economic interests of the successor states and those of their Western neighbors, and when the foundation for cooperation was laid during the Cold War period. The book is based on extensive original field research, including interviews with diplomats, government officials, scientists, and environmental activists in the successor states and Western Europe. Its findings underscore the importance of the domestic and international political context in which international environmental policy making occurs. It also deepens our understanding of the opportunities and dangers of positive inducements as a tool of international environmental policy.

This book presents a comprehensive analysis of the status and progress of China-ASEAN green development and examines the common development issues in China and ASEAN Member States (AMSs). It also explores development trends within the framework of global and regional environmental governance and discusses the approaches towards green development in China and AMSs, offering its own definition of green development and using a “pressure-state-response” (PSR) model to build a framework for assessing green development. The book includes typical policy measures and numerous practices for green development in China and AMSs in the form of tables, figures and boxes. Based on detailed analysis, it argues that the global 2030 Agenda for Sustainable Development brings significant opportunities to China and AMSs, that the ongoing pragmatic cooperation should be further advanced, and that a connection between the Belt and Road Initiative and green ASEAN Community should be established to achieve regional sustainable development. As such it furthers readers’ understanding of environment and development and practical policy advice for promoting China-ASEAN cooperation on environment and green development. Intended for decision makers from the government, business sector, and civil societies who are working to boost green development and China-ASEAN cooperation, it is also a valuable resource for government officials, researchers and non-experts interested in creating a balanced relationship between the environment and development.

Examines the Mediterranean Action Plan from 1972 to 1987 as a successful international effort to coordinate the marine pollution control practices of the Mediterranean littoral countries through regional treaties, coordinated research and monitoring, integrated policies, and administrative and budget

An argument that resource scarcity and environmental degradation can provide an impetus for cooperation among countries. Common wisdom holds that the earth's dwindling natural resources and increasing environmental degradation will inevitably lead to inter-state conflict, and possibly even set off "resource wars." Many scholars and policymakers have considered the environmental roots of violent conflict and instability, but little attention has been paid to the idea that scarcity and degradation may actually play a role in fostering inter-state cooperation. *Beyond Resource Wars* fills this gap, offering a different perspective on the links between environmental problems and inter-state conflict. Although the contributors do not deny that resource scarcity and environmental degradation may become sources of contention, they argue that these conditions also provide the impetus for cooperation, coordination, and negotiation between states. The book examines aspects of environmental conflict and cooperation in detail, across a number of natural resources and issues including oil, water, climate change, ocean pollution, and biodiversity conservation. The contributors argue that increasing scarcity and degradation generally induce cooperation across states, but when conditions worsen (and a problem becomes too costly or a resource becomes too scarce), cooperation becomes more difficult. Similarly, low levels of scarcity may discourage cooperation because problems seem less urgent. With contributions from scholars in international relations, economics, and political science, *Beyond Resource Wars* offers a comprehensive and robust investigation of the links among scarcity, environmental degradation, cooperation, and conflict.

This is the first book to examine the link between international and national environmental institutions. It examines this link in depth by analyzing the making and implementation of North Sea pollution commitments. The author develops two models generating different propositions aimed at distinguishing the significance of institutions from other explanatory factors. The key to understanding the success of international institutions in the North Sea cooperation lies in the balancing of hard legally binding and soft politically acting institutions in the same issue-area. He goes on to show the extent to which different national institutions in Norway, the Netherlands and the UK are suited to implement the North Sea commitments.

Environmental issues stretch across scales of geographic space and require action at multiple levels of jurisdiction, including the individual level, community level, national level, and global level. Much of the scholarly work surrounding new approaches to environmental governance tends to overlook the role of sub-national governments, but this study examines the potential of sub-national participation to make policy choices which are congruent with global strategies and national mandates. This book investigates the emerging actors and new channels of Japan's environmental governance which has been taking shape within an increasingly globalized international system. By analysing this important new phenomenon, it sheds light on the changing nature of Japan's environmental policy and politics, and shows how the links between global strategies, national mandates and local action serve as an influential factor in Japan's changing structures of environmental governance. Further, it demonstrates that decision-making competencies are shared between actors operating at different levels and in new spheres of authority, resulting from collaboration between state and non-state actors. It highlights a number of the problems, challenges, and critiques of the actors in environmental governance, as well as raising new empirical and theoretical puzzles for the future study of governance over environmental and global issues. Finally, it concludes that changes in the tiers and new spheres of authority are leading the nation towards an environmentally stable future positioned within socio-economic and political constraints. Demonstrating that bridging policy gaps between local action, national policy and global strategies is potentially a way of reinventing environmental policy, this book will be of interest to students and scholars of Environmental Studies, Environmental Politics and Japanese Politics.
