MICHAEL PORTER'S CONTRIBUTION TO STRATEGIC MANAGEMENT
Strategic management is not static in nature; the models often include a feedback loop to monitor execution and to inform the next round of planning. Michael Porter identifies three principles underlying strategy: creating a "unique and valuable [market] position" making trade-offs by choosing "what not to do"

Seminar paper from the year 2003 in the subject Business economics - Business Management, Corporate Governance, grade: B (66%), University Of Wales Institute, Cardiff (Welsh School of Hospitality, Tourism and Leisure), course: Strategic Management, 15 entries in the bibliography, language: English, comment:, abstract: 'Strategy is the direction and scope of an organisation over the long term, which achieves advantage for the organisation through its configuration of resources within a changing environment and to fulfil stakeholder expectations' Johnson and Scholes (2002) p10 Strategy plays an important, if not the most important role in an organisation. Not only concerning competition, but regarding all aspects of the business. Competition has always been the greatest fear of every businessman. Trying to think ahead of the competitors is the only option a successful business owner has. Developing a strategy, adapting and improving it and ensuring that employees are aware of the business mission are only a few criteria, which help to gain competitive advantage. Professor Michael Porter developed the so-called model of "generic competitive strategies," which will be explained in the first part of this report. Later on the report will outline problems, which occur in Professor Porter's model. The second part of the report applies Porter's concept to a tourism organisation and analyses its relevance for the chosen business.'

Examines and explains the revolutionary business frameworks of Michael Porter, with examples to illustrate and update Porter's ideas for achieving and sustaining competitive success.

The purpose of this book is to focus on the contribution of one of the most prominent scholars in the strategy field, Michael Porter, from both a practitioner, that is Chief Executive Officer (CEO), perspective, and from a research perspective. Using such a dual perspective may improve the relevance of strategy research for the business community. Four leading chief executives, two from European multinationals (Royal Dutch/Shell Group and Unilever N.V.) and two from important Dutch public organizations (the Port of Rotterdam and the Ministry of Economic Affairs), were invited to reflect on Porter's contributions to four levels of analysis: (1) business level strategy, (2) corporate level strategy, (3) regional competitiveness and finally (4) national competitiveness. Against this background, the book is structured as follows: Chapters 2 to 8 deal with the four mentioned levels of analysis from a dual perspective - theoretical and managerial. The two final chapters aim to find out how Porter's theories are related to each other and whether and how the different levels of analysis can be connected.

Though the cases in Cases in Competitive Strategy may be informative when studied on their own, they are designed to be read and analyzed in combination with the companion volume, Competitive Strategy. The conceptual materials and the cases are designed to reinforce each other, showing the connection between the theory and the practice of competitive strategy formulation.

Now beyond its eleventh printing and translated into twelve languages, Michael Porter's The Competitive Advantage of Nations has changed completely our conception of how prosperity is created and sustained in the modern global economy. Porter's groundbreaking study of international competitiveness has shaped national policy in countries around the world. It has also transformed thinking and action in states, cities, companies, and even entire regions such as Central America. Based on research in ten leading trading nations, The Competitive Advantage of Nations offers the first theory of competitiveness based on the causes of the productivity with which companies compete. Porter shows how traditional comparative advantages such as natural resources and pools of labor have been superseded as sources of prosperity, and how broad macroeconomic accounts of competitiveness are insufficient. The book introduces Porter's "diamond," a whole new way to understand the competitive position of a nation (or other locations) in global competition that is now an integral part of international business thinking. Porter's concept of "clusters," or groups of interconnected firms, suppliers, related industries, and institutions that arise in particular locations, has become a new way for companies and governments to think about economies, assess the competitive advantage of locations, and set public policy. Even before publication of the book, Porter's theory had guided national reassessments in New Zealand and elsewhere. His ideas and personal involvement have shaped strategy in countries as diverse as the Netherlands, Portugal, Taiwan, Costa Rica, and India, and regions such as Massachusetts, California, and the Basque country. Hundreds of cluster initiatives have flourished throughout the world. In an era of intensifying global competition, this pathbreaking book on the new wealth of nations has become the standard by which all future work must be measured.

Harvard professor, Michael Porter has been one of the most influential figures in strategic management research over the last three decades. He infused a rigorous theoretical framework of industrial organization economics with the then still embryonic field of strategic management and elevated it to its current status as an academic discipline. Porter's outstanding career is also characterized by its cross-disciplinary nature. Following his most important work on strategic management, he then made a leap to the policy side and dealt with a completely different set of analytical units. More recently he has made a foray into inner city development, environmental regulations, and health care services. Throughout these explorations Porter has maintained his integrative approach, seeking a road that links management case studies and the general model building of mainstream economics. With expert contributors from a range of disciplines including strategic management, economic development, economic geography, and planning, this book assesses the contribution Michael Porter has made to these respective disciplines. It clarifies the sources of tension and controversy relating to all the major strands of Porter's work, and provides academics, students, and practitioners with a critical guide for the application of Porter's models. The book highlights that while many of the criticisms of Porter's ideas are valid, they are almost an inevitable outcome for a scholar who has sought to build bridges across wide disciplinary valleys. His work has provided others with a set of frameworks to explore in more depth the nature of competition, competitive advantage, and clusters from a range of vantage points.

Porter's five forces analysis is a framework for analyzing the level of competition within an industry and business strategy development. It draws upon industrial organization (IO) economics to derive five forces that determine the competitive intensity and therefore the attractiveness of an industry. Attractiveness in this context refers to the overall industry profitability. An "unattractive" industry is one in which the combination of these five forces acts to drive down overall profitability. A very unattractive industry would be one approaching "pure competition," in which available profits for all firms are driven to normal profit. This analysis is associated with its principal innovator Michael E. Porter of Harvard University. This updated and expanded second edition of Book provides a user-friendly introduction to the subject. Taking a clear structural framework, it guides the reader through the subject's core elements. A flowing writing style combines with the use of illustrations and diagrams throughout the text to ensure the reader understands even the most complex of concepts. This succinct and enlightening overview is a required reading for all those interested in the subject. We hope you find this book useful in shaping your future career & Business.

Examining some of the new and emerging issues in strategic management, Loizos Heracleous offers a fresh approach to the established ideas of strategy. Beginning with the historical development of the strategy field, including the influence of industrial organisation and the resource-based view, he develops a new perspective labelled an 'organisational action' view of strategy. This approach is theoretically underlain by organisation theory and takes seriously such issues as the role of agency, the need for a longitudinal focus on process, the complexities of strategy implementation, and organisational facets such as strategic choice, organisational culture, organisational discourses and learning. Combining theoretical subtlety with an applied orientation, Heracleous examines topical areas such as corporate governance, inter-organisational networks, and organising for the future. With original research and extensive surveys of the strategy literature, combined with a strong practical orientation, this book is ideal for MBA students, strategy researchers and the more thoughtful practitioner.
