During Medieval times, the Black Death wiped out one-fifth of the world's population. Four centuries later, in 1665, the plague returned with a vengeance, cutting a long and deadly swathe through the British Isles. In this title, the author focuses on Cambridge, where every death was a singular blow affecting the entire community.

Upon its original publication, *Plagues and Peoples* was an immediate critical and popular success, offering a radically new interpretation of world history as seen through the extraordinary impact—political, demographic, ecological, and psychological—of disease on cultures. From the conquest of Mexico by smallpox as much as by the Spanish, to the bubonic plague in China, to the typhoid epidemic in Europe, the history of disease is the history of humankind. With the identification of AIDS in the early 1980s, another chapter has been added to this chronicle of events, which William McNeill explores in his new introduction to this updated edition. Thought-provoking, well-researched, and compulsively readable, *Plagues and Peoples* is that rare book that is as fascinating as it is scholarly, as intriguing as it is enlightening. "A brilliantly conceptualized and challenging achievement" (Kirkus Reviews), it is essential reading, offering a new perspective on human history.

Thomson, George.

The plague outbreak of 1636 in Newcastle-upon-Tyne was one of the most devastating in English history. This hugely moving study looks in detail at its impact on the city through the eyes of a man who stayed as others fled: the scrivener Ralph Tailor. As a scrivener Tailor was responsible for many of the wills and inventories of his fellow citizens. By listening to and writing down the final wishes of the dying, the young scrivener often became the principal provider of comfort in people's last hours. Drawing on the rich records left by Tailor during the course of his work along with many other sources, Keith Wrightson vividly reconstructs life in the early modern city during a time of crisis and envisions what such a calamitous decimation of the population must have meant for personal, familial, and social relations.

Underscoring the human dimensions of the epidemic, Lloyd and Dorothy Moote dramatically recast the history of the Great Plague and offer a masterful portrait of a city and its inhabitants besieged by—and defiantly resisting—unimaginable horror.

From the acclaimed author of *Miracle Cure* and *The Third Horseman*, the epic story of the collision between one of nature's smallest organisms and history's mightiest empire During the golden age of the Roman Empire, Emperor Justinian reigned over a territory that stretched from Italy to North Africa. It was the zenith of his achievements and the last of them. In 542 AD, the bubonic plague struck. In weeks, the glorious classical world of Justinian had been plunged into the medieval and modern Europe was born. At its height, five thousand people died every day in Constantinople. Cities were completely depopulated. It was the first pandemic the world had ever known and it left its indelible mark: when the plague finally ended, more than 25 million people were dead. Weaving together history, microbiology, ecology, jurisprudence, theology, and epidemiology, Justinian's Flea is a unique and sweeping account of the little known event that changed the course of a continent.

Plague has been the most feared disease across Europe since the Black Death in the 1340s. Dreaded because of the scale of the mortality and its sheer foulness, its periodic outbreaks had a devastating impact. London's last and most destructive attack came in 1665, when, according to Bishop Gilbert Burnet, 'a most terrible plague broke out, that depopulated the city of London, ruined the trade of the nation, and swept away about a hundred thousand persons'. Roughly one-fifth of the city's population died, most of them within just eight months. The epidemic was not confined to London; East Anglia and southern England also suffered, and it spread as far north as Tyneside and Wearside. Places such as Colchester, Winchester, Southampton, Norwich and, the most famous case of all, Eyam in Derbyshire, suffered a higher proportion of deaths than did London. It is small wonder that Daniel Defoe described 1665 as 'this calamitous Year'.
