"Offers an accurate and scientifically current introduction to the debate over the origins of life and the universe."--Back cover.

To many people, the main question about extraterrestrial life is

Access Free The Privileged Planet How Our Place In

Whether or not it exists.

But to the scientific community, that question has already been answered: It does. So confident are scientists of the existence of life on other planets that they've invested serious amounts of money, time and prestige in finding and studying it. NASA has started an Institute of Astrobiology, for instance, and the University of Washington, Seattle, began in September 1999 to accept graduate students into its Department of Astrobiology. Life Everywhere is the first book to lay out for a general reader what the new science of astrobiology is

all about. It asks the fascinating questions researchers are asking themselves and one another:

- u What is life?
- u How does it originate?
- u How often does life survive once it arises?
- u How does evolution work?
- u What determines whether complex or even intelligent life will emerge from more primitive forms?

Informed by interviews with most of the experts in this nascent subject, *Life Everywhere* introduces readers to one of the most important scientific disciplines of the coming century.

Many books have been written

on conservative politics. Many more have been written calling Christians to

holiness and spiritual revival. Few, however, have managed to combine a clear

explanation of the conservative political

perspective with its corresponding personal and spiritual virtue. In

INDIVISIBLE, James Robison, the founder and president of LIFE Outreach International, partners with Jay Richards,

Ph.D., a writer who has appeared in both the New York Times and The

Washington Post. Together, they tackle tough, controversial political

issues facing conservative

Christians today, including abortion, stem cell research, education, economics, health care, the environment, judicial activism, marriage, and others. Written to appeal to a broad spectrum of believers, INDIVISIBLE not only argues political questions from a Scriptural standpoint, it also provides simple arguments that Christians can use to support their beliefs in public settings. Most significantly, Robison and Richards recognize that the point of origin for spiritual and moral transformation is the individual. "We are

convinced by historical precedent that long term cultural change requires not merely sound thinking and public good works but rather, God's spiritual and moral transformation of us as individuals, which will then transform our churches, our communities, our culture, and ultimately our politics." James Robison is the founder and president of LIFE Outreach International, a worldwide Christian relief organization. He is also the host of LIFE Today, a daily syndicated television program that reaches 300 million homes in the U.S., Canada, Europe, and Australia. He is the author

of many books, including *The Absolutes*, *True Prosperity*, and *Living in Love*, and has spoken to millions of people through evangelistic crusades since entering public ministry in 1962. Jay W. Richards, Ph.D., is a Senior Fellow at the Discovery Institute and the author of many books, including the award-winning *Money, Greed, and God* and *The Privileged Planet*. He is the executive director of the documentaries *The Call of the Entrepreneur* and *The Birth of Freedom*. He has been featured in the *New York Times* and the *Washington Post* and has appeared on *Larry King Live*.

Argues that the universe was configured to give rise to an intelligent species of life forms, namely human beings.

Beneath dense gray clouds through which no sun shone lay a forgotten planet. It was a nightmare world of grotesque and terrifying animal-plant life. Gigantic beetles, spiders, bugs and ants filled the putrid, musty earth - ready to kill and devour anything in sight. There were men amidst this horror - men who

cringed and ran from the ravening monsters and huddled in the mushroom forests at night. Burl was one of these creatures. But one day inspiration hit Burl. He would find a weapon - he would fight back. And with this idea the first step was taken in man's most desperate flight for freedom in this most horrible of all worlds. But it was only a first step.

What determines whether complex life will arise on a planet, or even any life at all? Questions such as these are investigated in this groundbreaking book. In doing so, the authors synthesize information from astronomy, biology, and paleontology, and apply it to what we know about the rise of life on Earth and to what could possibly happen elsewhere in the universe.
