of storytelling. Spellbinding." **TRACY  
CHEVALIER** Imagine you could erase  
grief. Imagine you could remove pain.  
Imagine you could hide the darkest, most  
horrifying secret. Forever. Young Emmett  
Farmer is working in the fields when a  
strange letter arrives summoning him  
away from his family. He is to begin an

that arouses fear, superstition, and prejudice amongst their small community, but one neither he nor his parents can afford to refuse. For as long as he can recall, Emmett has been drawn to books, even though they are strictly forbidden. Bookbinding is a sacred calling, Seredith informs her new apprentice, and he is a binder born. Under the old woman's watchful eye, Emmett learns to hand-craft the elegant leather-bound volumes. Within each one they will capture something unique and extraordinary: a memory. If there's something you want to forget, a binder can help. If there's something you need to erase, they can assist. Within the pages of the books they create, secrets are concealed and the past is locked away. In a vault under his mentor's workshop rows upon rows of books are meticulously stored. But while Seredith is an artisan, there are others of their kind, avaricious

Keane Flanery and amoral tradesman who use their talents for dark ends—and just as Emmett begins to settle into his new circumstances, he makes an astonishing discovery: one of the books has his name on it. Soon, everything he thought he understood about his life will be dramatically rewritten. An unforgettable novel of enchantment, mystery, memory, and forbidden love, *The Binding* is a beautiful homage to the allure and life-changing power of books—and a reminder to us all that knowledge can be its own kind of magic.

This book investigates the importance of printing in early-modern Central Europe, revealing a complicated web of connections linking printers and scholars, Jews and Christians, from the Baltic to the Adriatic.

Neurogenetics is intended for any physician or scientist who manages patients with inherited diseases of the nervous system. It presents the clinical phenotypes of the most commonly inherited neurologic diseases, and their molecular pathogenesis, followed by a description of the appropriate tests to be used in diagnosis. Two introductory chapters familiarize the nongeneticist with medical genetic terminology and molecular genetic techniques useful in the analysis of genetic disease and genetic testing. Subsequent chapters examine major neurologic disorders caused by single defects, as well as disease phenotypes such as Alzheimer disease or amyotrophic lateral sclerosis which may be caused by defects in single genes, but may also be seen as sporadic diseases. The genetic components of other common neurologic disorders, such as epilepsy,

Multiple sclerosis, migraine, and stroke are all covered in detail. The final chapter discusses genetic counseling of symptomatic and pre-symptomatic individuals. Throughout, chapters discuss genotype/phenotype correlations and, where appropriate, animal models for inherited human neurologic diseases. Several chapters are devoted to recently discovered diseases caused by unstable DNA repeats. Special emphasis is placed on conveying how DNA testing can be applied to the daily practice of geneticists and neurologists.

The book appears in two volumes, the first dealing primarily with chemical and structural aspects, and the second with metabolic aspects. The purpose is not only to review recent work on chemical and physiological aspects of bilirubin structure and metabolism, but also to emphasize the

When you find the courage to change at midlife, Angeles Arrien teaches, "a miracle happens." Your character is opened, deepened, strengthened, softened. You return to your soul's highest values. You are now prepared to create your legacy: an imprint of your dream for our world - a dream that can fully come true in *The Second Half of Life*. Working with images, poetry, metaphors, and other forms of symbolic language from diverse world cultures, Dr. Arrien introduces us to the Eight Gates of Initiation. By mastering their lessons and gifts, you harvest the meaning and purpose of your life and come into spiritual maturity. With *The Second Half of Life*, she takes you step-by-step through each gate to deepen your most valuable relationships, reclaim your

This book presents a diverse collection of chapters on basic research at the molecular level using Lepidoptera as model systems. This volume, however, is more than just a compendium of information about insect systems in general, or the Lepidoptera in particular. Each chapter is a self-contained treatment of a broad subject area, providing sufficient background information to give readers a sense of the guiding principles and central questions associated with each topic, in addition to major methodologies and findings. Comparisons with other major model systems are emphasized, with special attention given to the fruit fly, *Drosophila melanogaster*. Topics include: genetics,

mobile elements, embryogenesis, silk gland and chorion gene regulation, hormone action, neurobiology, the immune response and engineered baculoviruses. Molecular and developmental biologists at graduate and researcher levels will find this book of great interest.

The Retinoids: Biology, Biochemistry, and Disease provides an overview and synthesis of the retinoid molecules, from basic biology to mechanisms of diseases and therapy. Divided into five sections, the book covers retinoic acid signaling from biochemical, genetic, developmental, and clinical perspectives. The text is divided into five sections, the first of which examines vitamin A metabolic and enzymatic pathways. Focus then shifts to the role of retinoic acid signaling in development, and then to retinoids and

physiological function. The book concludes with chapters on retinoids, disease and therapy. Comprehensive in scope and written by leading researchers in the field, *The Retinoids: Biology, Biochemistry, and Disease* will be an essential reference for biologists, biochemists, geneticists and developmental biologists, as well as for clinicians and pharmacists engaged in clinical research involving retinoids.

The glucose-phosphorylating enzyme glucokinase (also known as hexokinase IV) plays a preeminent role as a glucose sensor and regulatory metabolic enzyme. The implications of this central position of glucokinase for the understanding and treatment of diabetes mellitus are far reaching. This book addresses the molecular and human genetic, as well as the physiological-chemical and

pharmacological aspects of the role glucokinase plays in glucose homeostasis and diseases of glucose metabolism, and how the enzyme serves as the drug target for the treatment of diabetes mellitus. The collection of assays by a team of internationally renowned authors includes basic science chapters dealing with the enzymology, structure and the kinetics of hexokinases, essays describing the biochemical genetics of glucokinase-linked hypo- and hyperglycemia syndromes, and papers that discuss the diverse roles of the enzyme in a variety of tissues. Finally, the book contains the latest information on the recently discovered class of weight drugs that activate glucokinase (i.e. glucokinase activators or GKAs). This volume is of great interest to basic and clinical diabetes researchers, geneticists, biochemists, physiologists and pharmacologists.

Metal ions play key roles in biology. Many are essential for catalysis, for electron transfer and for the fixation, sensing, and metabolism of gases. Others compete with those essential metal ions or have toxic or pharmacological effects. This book is structured around the periodic table and focuses on the control of metal ions in cells. It addresses the molecular aspects of binding, transport and storage that ensure balanced levels of the essential elements. Organisms have also developed mechanisms to deal with the non-essential metal ions. However, through new uses and manufacturing processes, organisms are increasingly exposed to changing levels of both essential and non-essential ions in new chemical forms. They may not have developed defenses against some of these forms (such as nanoparticles). Many diseases such as cancer, diabetes and

neurodegeneration are associated with metal ion imbalance. There may be a deficiency of the essential metals, overload of either essential or non-essential metals or perturbation of the overall natural balance. This book is the first to comprehensively survey the molecular nature of the overall natural balance of metal ions in nutrition, toxicology and pharmacology. It is written as an introduction to research for students and researchers in academia and industry and begins with a chapter by Professor R J P Williams FRS.
