Wildlife in the Serengeti. One of the greatest wilderness areas in the world, the Serengeti supports a magnificent diversity and abundance of animals, from the Big Five — lion, leopard, elephant, buffalo and black rhino (although these are rarely spotted) — to giraffe, Grant's gazelle, impala, kongoni, topi and eland. The Serengeti is famous for its predators: you can expect excellent lion and cheetah sightings (and exciting lion kills), and leopards are also regularly spotted.

Schaller also reveals lion behavior counter to what is commonly accepted by the general public. For example, lionesses are typically portrayed as doting mothers while male lions are depicted as lazy, thieving louts.

The most comprehensive book available on the lion, this classic work includes the author's findings on all aspects of lion behavior, including its social system, population dynamics, hunting behavior, and predation patterns. "If you have only enough time to read one book about field biology, this is the one I recommend." Edward O. Wilson, *Science* "This book conveys not only the fascination of its particular study of lion behavior but the drama and wonder and beauty of the intimate interdependence of all living things." *Saturday Review* "This is an important book, not just for its valuable information on lions, but for its broad, open, and intelligent approach to problems that cut across the fields of behavior, populations, ecology, wildlife management, evolution, anthropology, and comparative biology." Richard G. Van Gelder, *Bioscience*

Cheetahs of the Serengeti Plains is the most comprehensive account of carnivore social behavior to date. Synthesizing more than a decade of research in the wild, this book offers a detailed account of the behavior and ecology of cheetahs. Compared with other large cats, and other mammals, cheetahs have an unusual breeding system; whereas lions live in prides and tigers are solitary, some cheetahs live in

groups while others live by themselves. Tim Caro explores group and solitary living among cheetahs and discovers that the causes of social behavior vary dramatically, even within a single species. Why do cheetah cubs stay with their mother for a full year after weaning? Why do adolescents remain in groups? Why do adult males live in permanent associations with each other? Why do adult females live alone? Through observations on the costs and benefits of group living, Caro offers new insight into the complex behavior of this extraordinary species. For example, contrary to common belief about cooperative hunting in large carnivores, he shows that neither adolescents nor adult males benefit from hunting in groups. With many surprising findings, and through comparisons with other cat species, Caro enriches our understanding of the evolution of social behavior and offers new perspectives on conservation efforts to save this charismatic and endangered carnivore.

In this magnificent, heart-wrenching book--hailed Best Book of 1993 by the New York Times Book Review and USA Today--acclaimed naturalist and National Book Award winner George B. Schaller documents the plight of the mysterious panda--and urgently calls for the compassion needed to save these gentle animals from extinction. Includes a new Preface for this edition. 27-color plates.

Craig Packer takes us into Africa for a journey of fifty-two days in the fall of 1991. But this is more than a tour of magnificent animals in an exotic, faraway place. A field biologist since 1972, Packer began his work studying primates at Gombe and then the lions of the Serengeti and the Ngorongoro Crater with his wife and colleague Anne Pusey. Here, he introduces us to the real world of fieldwork--initiating assistants to lion research in the Serengeti, helping a doctoral student collect data, collaborating with Jane Goodall on primate research. As in the works of George Schaller and Cynthia Moss, Packer

transports us to life in the field. He is addicted to this land—to the beauty of a male lion striding across the Serengeti plains, to the calls of a baboon troop through the rain forests of Gombe—and to understanding the animals that inhabit it. Through his vivid narration, we feel the dust and the bumps of the Arusha Road, smell the rosemary in the air at lunchtime on a Serengeti verandah, and hear the lyrics of the Grateful Dead playing off bootlegged tapes. Into Africa also explores the social lives of the animals and the threats to their survival. Packer grapples with questions he has passionately tried to answer for more than two decades. Why do female lions raise their young in crèches? Why do male baboons move from troop to troop while male chimps band together? How can humans and animals continue to coexist in a world of diminishing resources? Immediate demands—logistical nightmares, political upheavals, physical exhaustion—yield to the larger inescapable issues of the interdependence of the land, the animals, and the people who inhabit it.

From flat-topped acacia trees to great migrations of wildebeest across an edgeless expanse of grass, the Serengeti is one of the world's most renowned ecosystems. And at the apex of this incredible landscape prowls its seemingly indomitable ruler: the Serengeti lion. These majestic mammals are skillful hunters, iconic, and integral to Serengeti health. But they also commit infanticide; eat local people and destroy local livelihoods; are a source of profit for those who make money shooting or conserving them (and sometimes both); and are in constant danger from the encroachments of another species: humans. With *Lions in the Balance*, celebrated lion researcher and conservationist Craig Packer takes us back into the complex, tooth-and-claw worlds of lion conservation and behavior. A sequel to Packer's *Into Africa*—which gave many readers their first experience of field work in Africa, of Tanzanian roads, of long hours spent identifying lions by their ear marks and scars, and of the joys of bootlegged Grateful

Dead tapes beneath savannah moons—this diary-based chronicle of adventure, real-life danger, and corruption will both alarm and entertain. Packer's story offers a look into the future of the lion, one in which the politics of conservation will require survival strategies far more creative and powerful than any now possessed by the citizens of the savannah—humans included. Packer is sure to infuriate poachers, politicians, and conservationists alike as he minces no words about the problems he sees. But with a narrative stretching from Arusha to Washington, DC, and marked by Packer's signature humor and incredible candor, *Lions in the Balance* is a tale of courage against impossible odds, a masterly blend of science and storytelling, and an urgent call to action that will captivate a pride of readers.

The Deer and the Tiger is Schaller's detailed account of the ecology and behavior of Bengal tigers and four species of the hoofed mammals on which they prey, based on his observations in India's Kanha National Park. "This book is a treasure house of biological information and it is also a delight to read. . . . Excellent photographs accompany the text." Robert K. Enders, American Scientist "The one book that has been my greatest source of inspiration is The Deer and the Tiger by George Schaller, based on the first ever scientific field study of the tiger. . . . This book is written by a scientist, but speaks from the heart. . . . It reveals startling information on feeding habitats, territorial behaviour, and the nuances that make up the language of the forest; you become totally immersed in the world of the tiger. . . . For all of us who work in tiger conservation, this book is the bible." Valmik Thapar, BBC Wildlife

The history of life on Earth is dominated by extinction events so numerous that over 99.9% of the species ever to have existed are gone forever. If animals could talk, we would ask them to recall their own ancestries, in particular the secrets as to how they avoided almost inevitable annihilation in the face of daily assaults by predators, climactic cataclysms, deadly infections and innate diseases. In Tears of

the Cheetah, medical geneticist and conservationist Stephen J. O'Brien narrates fast-moving science adventure stories that explore the mysteries of survival among the earth's most endangered and beloved wildlife. Here we uncover the secret histories of exotic species such as Indonesian orangutans, humpback whales, and the imperiled cheetah-the world's fastest animal which nonetheless cannot escape its own genetic weaknesses. Among these genetic detective stories we also discover how the Serengeti lions have lived with FIV (the feline version of HIV), where giant pandas really come from, how bold genetic action pulled the Florida panther from the edge of extinction, how the survivors of the medieval Black Death passed on a genetic gift to their descendents, and how mapping the genome of the domestic cat solved a murder case in Canada. With each riveting account of animal resilience and adaptation, a remarkable parallel in human medicine is drawn, adding yet another rationale for species conservation-mining their genomes for cures to our own fatal diseases. Tears of the Cheetah offers a fascinating glimpse of the insight gained when geneticists venture into the wild.

An understanding of social behaviour is increasingly necessary in farm animal husbandry as more animals are housed in groups rather than in individual stalls or pens. There may be economic or welfare reasons for such housing. This book is the first to specifically address this important subject. The chapters fall into three broad subject areas: concepts in social behaviour; species specific chapters; current issues. Authors include leading experts from Europe, North America, Australia and New Zealand. Animal welfare/behaviour issues are becoming increasingly important. Combines theoretical and practical details about the social behaviour of our most common farm species. Written by leading experts from around the world.
