In The Sixth Extinction, two-time winner of the National Magazine Award and New Yorker writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamian golden ...

The Sixth Extinction: An Unnatural History, by Elizabeth ...

The Sixth Extinction: An Unnatural History is a 2014 non-fiction book written by Elizabeth Kolbert and published by Henry Holt and Company. The book argues that the Earth is in the midst of a modern, man-made, sixth extinction. In the book, Kolbert chronicles previous mass extinction events, and compares them to the accelerated, widespread extinctions during our present time.

Excerpt: The Sixth Extinction: An Unnatural History | Audubon

In *The Sixth Extinction*, Elizabeth Kolbert studies the relationship between human beings and the environment, and concludes that human behavior is on the verge of causing (or may have already caused) a mass-extinction—the sixth in the history of the planet. All over the world, different species are already going extinct, thanks to the declining amount of available undeveloped land, and the rising temperature.

The Sixth Extinction: An Unnatural History by Elizabeth ...

The Sixth Extinction: An Unnatural History (2014) is a nonfiction book about the development, impact, and extinction of various species throughout the history of the world.

The Sixth Extinction Summary and Study Guide | SuperSummary

A fascinating look at the evidence for the world currently being at the start of a sixth extinction event, and how extinctions are driven by human activity. There's a background to the theories of evolution, and an explanation of why our assumptions of the resilience of the earth's systems may be horribly wrong.

Draws on the work of geologists, botanists, marine biologists, and other researchers to discuss the five devastating mass extinctions on Earth and predicts the coming of a sixth.

PLEASE NOTE: This is key takeaways and analysis of the book and NOT the original book. The Sixth Extinction: by Elizabeth Kolbert | Key Takeaways, Analysis & Review Preview: The Sixth Extinction is a book by award winning journalist, Elizabeth Kolbert. In this book, the author demonstrates that species are dying out at a rate comparable to the previous mass extinctions, and if the trend of global warming, deforestation, and pollution continues in its present course, the numbers of extinct species will meet or exceed that rate of destruction. This event will include the extinction of humanity. What this

## Access Free The Sixth Extinction An Unnatural History By Elizabeth Kolbert

means is that the current loss of life today will soon justify the term "The Sixth Extinction," a mass extinction like the one that destroyed the dinosaurs 65 million years ago. When humans originated about 100,000 years ago, they began to hunt some species into extinction. Their ability to outcompete other early hominids for food led to the extinction of those species, including Neanderthals. The extinction of species picked up steam when humans began transforming great swaths of forest and plains into farmland about 10,000 years ago... Inside this Instaread of *The Sixth Extinction*: Overview of the book, Important People, Key Takeaways, Analysis of Key Takeaways About the Author. With Instaread, you can get the key takeaways and analysis of a book in 15 minutes. We read every chapter, identify the key takeaways and analyze them for your convenience.

A new edition of the book that launched Elizabeth Kolbert's career as an environmental writer—updated with three new chapters, making it, yet again, "irreplaceable" (*Boston Globe*). Elizabeth Kolbert's environmental classic *Field Notes from a Catastrophe* first developed out of a groundbreaking, National Magazine Award-winning three-part series in *The New Yorker*. She expanded it into a still-concise yet richly researched and damning book about climate change: a primer on the greatest challenge facing the world today. But in the years since, the story has continued to develop; the situation has become more dire, even as our understanding grows. Now, Kolbert returns to the defining book of her career. She has added a chapter bringing things up-to-date on the existing text, plus three new chapters—on ocean acidification, the tar sands, and a Danish town that's gone carbon neutral—making it, again, a must-read for our moment.

**NATIONAL BESTSELLER** • The Pulitzer Prize – winning author of *The Sixth Extinction* returns to humanity's transformative impact on the environment, now asking: After doing so much damage, can we change nature, this time to save it? “ Important, necessary, urgent and phenomenally interesting. ” —Helen Macdonald, *The New York Times* That man should have dominion “ over all the earth, and over every creeping thing that creepeth upon the earth ” is a prophecy that has hardened into fact. So pervasive are human impacts on the planet that it's said we live in a new geological epoch: the Anthropocene. In *Under a White Sky*, Elizabeth Kolbert takes a hard look at the new world we are creating. Along the way, she meets biologists who are trying to preserve the world's rarest fish, which lives in a single tiny pool in the middle of the Mojave; engineers who are turning carbon emissions to stone in Iceland; Australian researchers who are trying to develop a “ super coral ” that can survive on a hotter globe; and physicists who are contemplating shooting tiny diamonds into the stratosphere to cool the earth. One way to look at human civilization, says Kolbert, is as a ten-thousand-year exercise in defying nature. In *The Sixth Extinction*, she explored the ways in which our capacity for destruction has reshaped the natural world. Now she examines how the very sorts of interventions that have imperiled our planet are increasingly seen as the only hope for its salvation. By turns inspiring, terrifying, and darkly comic, *Under a White Sky* is an utterly original examination of the challenges we face.

Bestselling author and environmental activist Bill McKibben recounts the personal and global story of the fight to build and preserve a sustainable planet. Bill McKibben is not a person you'd expect to find hand-cuffed in the city jail in Washington, D.C. But that's where he spent three days in the summer of 2011, after leading the largest civil disobedience in thirty years to protest the Keystone XL pipeline. A

## Access Free The Sixth Extinction An Unnatural History By Elizabeth Kolbert

few months later the protesters would see their efforts rewarded when President Obama agreed to put the project on hold. And yet McKibben realized that this small and temporary victory was at best a stepping - stone. With the Arctic melting, the Midwest in drought, and Hurricane Sandy scouring the Atlantic, the need for much deeper solutions was obvious. Some of those would come at the local level, and McKibben recounts a year he spends in the company of a beekeeper raising his hives as part of the growing trend toward local food. Other solutions would come from a much larger fight against the fossil - fuel industry as a whole. *Oil and Honey* is McKibben's account of these two necessary and mutually reinforcing sides of the global climate fight - from the absolute centre of the maelstrom and from the growing hive of small - scale local answers to the climate crisis. With characteristic empathy and passion, he reveals the imperative to work on both levels, telling the story of raising one year's honey crop and building a social movement that's still cresting.

100 Best Non Fiction Books has its origins in the recent 2 year-long Observer serial which every week featured a work of non fiction). It is also a companion volume to McCrum's very successful 100 Best Novels published by Galileo in 2015. The list of books starts in 1611 with the King James Bible and ends in 2014 with Elizabeth Kolbert's *The Sixth Extinction*. And in between, on this extraordinary voyage through the written treasures of our culture we meet Pepys' Diaries, Charles Darwin's *The Origin of Species*, Stephen Hawking's *A Brief History of Time* and a whole host of additional works.

Chronicling five times in the history of the earth in which more than half of all living species disappeared in a geological instant, a geological study states that we are on the brink of a sixth mass extinction and presents supporting evidence. Reprint.

An introduction to the scientific consensus on the human role in global warming.

Why have island ecosystems always suffered such high rates of extinction? In our age, with all the world's landscapes, from Tasmania to the Amazon to Yellowstone, now being carved into island-like fragments by human activity, the implications of this question are more urgent than ever. Over the past eight years, David Quammen has followed the threads of island biogeography on a globe-encircling journey of discovery.
