Quantum machine learning investigates how quantum computers can be used for data-driven prediction and decision making. The books summarises and conceptualises ideas of this relatively young discipline for an audience of computer scientists and physicists from a graduate level upwards. It aims at providing a starting point for those new to the field, showcasing a toy example of a quantum machine learning algorithm and providing a detailed introduction of the two parent disciplines. For more advanced readers, the book discusses topics such as data encoding into quantum states, quantum algorithms and routines for inference and optimisation, as well as the construction and analysis of genuine ``quantum learning models". A special focus lies on supervised learning, and applications for near-term quantum devices.

"Time is no more for the fifteen hundred souls who perished with them; but Honour and Glory, by strange ways and unlooked-for events, have come into their own. It was not Time, nor the creatures and things of Time, that received their final crown there; but things that have nothing to do with Time, qualities that, in their power of rising beyond all human limitations, we must needs call divine." "To say that all the men who died on the Titanic were heroes would be as absurd as to say that all who were saved were cowards. There were heroes among both groups and cowards among both groups, as there must be among any large number of men." "In such moments all artificial bonds are useless. It is what men are in themselves that determines their conduct; and discipline and conduct like this are proofs, not of the superiority of one race over another, but that in the core of human nature itself there is an abiding sweetness and soundness that fear cannot embitter nor death corrupt." The story of the sinking of the Titanic based on first hand accounts collected in the days and weeks following the disaster. The story of the Titanic is now well known, but in the months following the disaster wild speculation was rife. On Thursday 22 May 1912, a mere 37 days after the sinking, respected London publisher Grant Richards, delivered Filson Young's book to booksellers around the capital. It was the first attempt to plot the demise of the unsinkable ship from a well-respected writer who had already argued in the light of the Oceana sinking, for proper use of the wireless on board ships. Both Filson and Grant knew victims of the sinking and both worked hard to gather first-hand testimony to use in the book. Much of his telling of the story still stands today and his speculations about the feeling of daily life aboard the doomed ship are used in books and films on the subject.

An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

This is an account of how a principal combines the rational and emotional components of leadership to lead the transformation of a school. Most attempts at reform come from the outside, with people wishing to impose a curriculum and benchmarks; this book assumes that schools can transform themselves, but only when those involved in schools (especially principals) develop self-respect and achieve self-actualization. The author believes, and has demonstrated in his colleges, that a sensitive, thoughtful, proactive leadership might yet deliver the quality outcomes that the community desires from schooling.

In Powerful Learning, Linda Darling-Hammond and an impressive list of co-authors offer a clear, comprehensive, and engaging exploration of the most effective classroom practices. They review, in practical terms, teaching strategies that generate meaningful K-12 student understanding, and occur both within the classroom walls and beyond. The book includes rich stories, as well as online videos of innovative classrooms and schools, that show how students who are taught well are able to think critically, employ flexible problem-solving, and apply learned skills and knowledge to new situations.

Titanic. Just the name evokes tales of the doomed ship that have captivated people of all ages for more than 100 years. Early readers will enjoy this exciting account of the world's most famous disaster-at-sea and the discovery of it's remains many years later. Step 4 books are perfect for independent readers who are confident with simple sentences and are just starting to tackle paragraphs.

Improve the quality of organizational learning in your school and address how current demands for rapid change and accountability contribute to levels of fear and stress. The author draws on educational, psychological, and neuroscientific research to show how leaders can change the prevailing emotional climate or tone of a school to promote deeper learning at all levels.

Designed to support teachers in developing new strategies and pedagogies for teaching music, and for teacher education students requiring a comprehensive overview of the subject Teaching Secondary Music provides a modern and accessible insight into the key issues in music education at secondary level. Focusing on the nature of musical understanding and how to facilitate and assess musical progress, the editors bring together a team of experienced music educators leading the programme of support for the new secondary curriculum. Supported with practical examples, case studies and resources exploring effective practice, Teaching Secondary Music covers the key concepts and approaches which underpin good practice in secondary music education. These include: -How music relates to other curriculum subjects -Ways of implementing newer aspects of the curriculum -The music industry and intellectual property rights -Working with a range of musicians -Using ICT as a tool for musical performance -Developing musical leadership This book is essential reading for PGCE Secondary music specialists and practising music teachers. Jayne Price is the Music Education Coordinator in the School of Education and Professional Development at the University of Huddersfield. Jonathan Savage is a Reader in Education at the Institute of Education, Manchester Metropolitan University.
