The hypothesis of the video

“ Unstoppable Solar Cycles ” is that the global climate system is too complex for humans to affect it so dramatically.

Instead, change in solar radiation is what causes the earth to cool and warm. Stating that temperature affects CO2 levels rather than the other way around defends this hypothesis.

Argues that global warming is a natural, cyclical phenomenon that has not been caused by human activities and that its negative consequences have been greatly overestimated.

Supported by in-depth scientific evidence, Singer and Avery present the compelling concept that global temperatures have been rising mostly or entirely because of a natural cycle. Unstoppable Global Warming explains why we're warming, why it's not very dangerous, and why we can't stop it anyway.

The warming of the Earth has been the subject of intense debate and concern for many scientists, policy-makers, and citizens for at least the past decade. Climate Change Science: An Analysis of Some Key Questions, a new report by a committee of the National Research

Argues that special interest groups with specific agendas and politics have corrupted the climate change debate.

"The Oxford Companion to Global Change provides a concise guide to the realities of a planet in transition, covering such crucial topics as the threat of declining crude oil production, the status of coal-burning technology, and the future of nuclear power. Over 150 scientists and specialists, led by David J. Cuff and Andrew S. Goudie of Temple University and Oxford University respectively, contribute entries on key subjects, demonstrating the social, political, and technological interrelationships between them."--BOOK JACKET.

An exposé of some of the more controversial agendas behind global
