Uranus

Uranus is the seventh planet from the Sun. Its name is a reference to the Greek god of the sky, Uranus, who, according to Greek mythology, was the grandfather of Zeus and father of Cronus (). It has the third-largest planetary radius and fourth-largest planetary mass in the Solar System. Uranus is similar in composition to Neptune, and both have bulk chemical compositions which differ from that ...

Uranus - Wikipedia

Uranus was discovered in 1781 by William Herschel. Uranus was the first planet found using a telescope. Uranus is an Ice Giant planet and nearly four times larger than Earth. Uranus has 27 known moons, most of which are named after literary characters. Like Saturn, Jupiter and Neptune, Uranus is a ringed planet.

Overview | Uranus - NASA Solar System Exploration

Uranus is slightly larger in diameter than its neighbor Neptune, yet smaller in mass. It is the second least dense planet; Saturn is the least dense of all. Uranus gets its blue-green color from methane gas in the atmosphere. Sunlight passes through the atmosphere

Uranus | NASA

Uranus has the coldest temperature of any of the planets in the Solar System. Even though Neptune is more distant from the Sun, Uranus has the coldest temperature of all the planets in the Solar System. Due to Uranus having very little internal heat to complement the heat from the Sun, its atmosphere has a minimum temperature of 49K (-224.2°C; -371.56°F).

50 Unique Uranus Facts About The Sideways Planet

Uranus was discovered to be a planet only in 1781 by Sir William Herschel. Astrological interpretations associate Uranus with the principles of ingenuity, new or unconventional ideas, individuality, discoveries, electricity, inventions, democracy, and revolutions. Uranus, among all planets, most governs genius.

Planets in astrology - Wikipedia

Uranus is the seventh planet from the Sun in the Solar System. It is an ice giant. It is the third largest planet in the solar system. The planet is made of ice, gases and liquid metal. Its atmosphere contains hydrogen (1 H), helium (2 He) and methane. The temperature on Uranus is $-197\text{ }^{\circ}\text{C}$ ($-322.6\text{ }^{\circ}\text{F}$; 76.1 K) near the top of its atmosphere, but its small solid core (about 55% the mass of ...

heaven. According to Hesiod's Theogony, Gaea (Earth), emerging from primeval Chaos, produced Uranus, the Mountains, and the Sea. From Gaea's subsequent union with Uranus were born the Titans, the Cyclopes, and the Hecatoncheires.

Uranus | Myth & Summary | Britannica

A team of scientists from NASA used the old Voyager 2 data and found some interesting information about Uranus. Uranus had blasted a gas bubble of enormous size, it was nearly 22,000 times bigger than Earth. A detailed research report was published on NASA website recently. It was also published in ...

Ben Bova, author of Earth, continues his exploration of the future of a human-settled Solar System with the science fiction action adventure Uranus, the first of his Outer Planets trilogy. On a privately financed orbital habitat above the planet Uranus, political idealism conflicts with pragmatic, and illegal, methods of financing. Add a scientist who has funding to launch a probe deep into Uranus's ocean depths to search for signs of life, and you have a three-way struggle for control. Humans can't live on the gas giants, making instead a life in orbit. Kyle UMBER, a religious idealist, has built Haven, a sanctuary above the distant planet Uranus. He invites "the tired, the sick, the poor" of Earth to his orbital retreat where men and women can find spiritual peace and refuge from the world. The billionaire who financed Haven, however, has his own designs: beyond the reach of the laws of the inner planets Haven could become the

center for an interplanetary web of narcotics, prostitution, even hunting human prey. Meanwhile a scientist has gotten funding from the Inner Planets to drop remote probes into the “oceans” of Uranus, in search of life. He brings money and prestige, but he also brings journalists and government oversight to Haven. And they can’t have that. Uranus is the seventh planet from the sun and has a special feature, it tilts! Discover the mysteries of this ice giant that sits half in darkness for more than 40 years at a time!

Introduces the planet Uranus, discussing its history, composition, and role in the solar system.

A “dissident of the gender-sex binary system” reflects on gender transitioning and political and cultural transitions in technoscientific capitalism. Uranus, the frozen giant, is the coldest planet in the solar system as well as a deity in Greek mythology. It is also the inspiration for uranism, a concept coined by the writer Karl Heinrich Ulrich in 1864 to define the “third sex” and the rights of those who “love differently.” Following Ulrich, Paul B. Preciado dreams of an apartment on Uranus where he might live beyond existing power, gender and racial strictures invented by modernity. “My trans condition is a new form of uranism,” he writes. “I am not a man. I am not a woman. I am not heterosexual. I am not homosexual.

I am not bisexual. I am a dissident of the gender-sex binary system. I am the multiplicity of the cosmos trapped in a binary political and epistemological system, shouting in front of you. I am a uranist confined inside the limits of technoscientific capitalism." This book recounts Preciado's transformation from Beatriz into Paul B., but it is not only an account of gender transitioning. Preciado also considers political, cultural, and sexual transition, reflecting on issues that range from the rise of neo-fascism in Europe to the technological appropriation of the uterus, from the harassment of trans children to the role museums might play in the cultural revolution to come. *An Apartment on Uranus* is a bold, transgressive, and necessary book.

"Discusses the planet Uranus, including observations by ancient cultures, current knowledge of Uranus, and plans for future scientific research and space exploration"--

Uranus is the seventh planet from the sun and the third largest in the solar system. Along with Jupiter, Saturn, and Neptune, it is classified as a gas giant - the large planets made mostly of gas and ice. The book describes Uranus's place in the solar system, its rings and moons, its orbit, and the discoveries and space missions that have helped scientists understand the planet.

Two of the most mysterious planets in our solar system are the cold, beautiful blue worlds of Uranus and Neptune. They lie so far from the Sun that they appear only as small dots in even the largest
