There's no need for you to be a math genius here. Just know the formula for calculating the present value of an amount received in the future as:  $\text{Present Value} = \text{Amount} / (1 + \text{Discount Rate})^{\text{Period Number}}$ . So, for example, the present value of \$100,000 earned in Year 5 is:  $\text{Present Value} = \$100,000 / (1 + 15\%)^5 = \$49,718$

The market approach aims to establish the value of a company based on how similar firms are priced on the stock exchange or through company transactions. Using the market approach, price-related indicators such as price to earnings, sales and book values are utilised. An ever-present problem however, is that different valuation multiples and valuation methodologies tend to provide the analyst with contradictory outputs. The solution to this problem so far has been to claim that the market approach is more art than science, thus providing the analyst with the freedom to alter the multiples at their own discretion to reach a uniform value or range. Valuation:
