"A fascinating book about how platform internet companies (Amazon, Facebook, and so on) are changing the norms of economic competition." --Fast Company Shoppers with a bargain-hunting impulse and

Online Library Virtual

Internet access can find a universe of products at their fingertips. But is there a dark side to internet commerce? This thought-provoking exposé invites us to explore how sophisticated algorithms and data-crunching are changing the nature of market

Online Library Virtual

Competition, and not always for the better. Introducing into the policy lexicon terms such as algorithmic collusion, behavioral discrimination, and super-platforms, Ariel Ezrachi and Maurice E. Stucke explore the resulting impact on competition, our democratic ideals, our wallets, and our well-

Online Library Virtual

being. "We owe the authors our deep gratitude for anticipating and explaining the consequences of living in a world in which black boxes collude and leave no trails behind. They make it clear that in a world of big data and algorithmic pricing, consumers are

Online Library Virtual

outgunned and antitrust laws are outdated, especially in the United States."

--Science "A convincing argument that there can be a darker side to the growth of digital commerce. The replacement of the invisible hand of competition by the digitized hand of

Using dozens of vivid
examples to show
how society
overprescribed
competition as a
solution and when
unbridled rivalry
hurts consumers, kills
entrepreneurship, and

Online Library Virtual

increases economic inequality, two free-market thinkers diagnose the sickness caused by competition overdose and provide remedies that will promote sustainable growth and progress for everyone, not just wealthy shareholders and those at the top. Whatever illness our

Online Library Virtual

Society suffers, competition is the remedy. Do we want better schools for our children? Cheaper prices for everything? More choices in the marketplace? The answer is always: Increase competition. Yet, many of us are unhappy with the results. We think we 're paying less,

Online Library Virtual

but we're getting much less. Our food has undeclared additives (or worse), our drinking water contains toxic chemicals, our hotel bills reveal surprise additions, our kids' schools are failing, our activities are tracked so that advertisers can target us with relentless

Online Library Virtual

promotions. All will be cured, we are told, by increasing the competitive pressure and defanging the bloated regulatory state. In a captivating exposé, Maurice E. Stucke and Ariel Ezrachi show how we are falling prey to greed, chicanery, and cronyism. Refuting the almost religious

Online Library

Virtual

belief in rivalry as the vehicle for prosperity, the authors identify the powerful and powerful corporations, lobbyists, and lawmakers responsible for pushing this toxic competition—and argue instead for a healthier, even nobler, form of competition.

Competition

Overdose diagnoses the disease—and provides a cure for it.

Big Data and Big
Page 56/70

Online Library Virtual

Analytics are a big deal today. Big Data is playing a pivotal role in many companies' strategic decision-making. Companies are striving to acquire a 'data advantage' over rivals. Data-driven mergers are increasing. These data-driven business strategies and mergers raise

Online Library Virtual

significant implications for privacy, consumer protection and competition law. At the same time, European and United States' competition authorities are beginning to consider the implications of a data-driven economy on competition policy. In 2015, the

Online Library

Virtual

Competition

Commission launched a competition inquiry into the e-commerce sector and issued a statement of objections in its Google investigation.

The implications of Big Data on competition policy will likely be a part of the mix. Big Data and Competition Policy is

Online Library Virtual

the first work to offer a detailed description of the important new issue of Big Data and explains how it relates to competition laws and policy, both in the EU and US. The book helps bring the reader quickly up to speed on what is Big Data, its competitive implications, the competition

Online Library Virtual

authorities' approach to data-driven mergers and business strategies, and their current approach's strengths and weaknesses. Written by two recognized leading experts in competition law, this accessible work offers practical guidance and theoretical discussion of the

potential benefits
(including data-driven
efficiencies) and
concerns for the
practitioner, policy
maker, and academic
alike.
