This book is about coding interview questions from software and Internet companies. It covers five key factors which determine performance of candidates: (1) the basics of programming languages, data structures and algorithms, (2) approaches to writing code with high quality, (3) tips to solve difficult problems, (4) methods to optimize code, (5) soft skills required in interviews. The basics of languages, algorithms and data structures are discussed as well as questions that explore how to write robust solutions after breaking down problems into manageable pieces. It also includes examples to focus on modeling and creative problem solving. Interview questions from the most popular companies in the IT industry are taken as examples to illustrate the five factors above. Besides solutions, it contains detailed analysis, how interviewers evaluate solutions, as well as why they like or dislike them. The author makes clever use of the fact that interviewees will have limited time to program meaningful solutions which in turn, limits the options an interviewer has. So the author covers those bases. Readers will improve their interview performance after reading this book. It will be beneficial for them even after they get offers, because its topics, such as approaches to analyzing difficult problems, writing robust code and optimizing, are all essential for high-performing coders.

A formal training program with theoretical and practical components is essential for all emergency medical personnel involved in providing care for critically injured patients. Communication, effective first aid, and on time transportation to a health center play a major role in improving quality of care for critically injured patients. Using life experience examples, participants in the study emphasized the importance of each factor on the delivery of quality care for critically injured patients. Recommendations based on the study findings included two main categories. The first category illustrated recommendations to stakeholders, and the second category reflected recommendations for further study. Stakeholders in this study included healthcare leaders in Afghanistan, healthcare professionals involved in providing health care in Afghanistan, and local people in Afghanistan. The modified van Kaam method in the qualitative phenomenological study involved conducting semistructured interviews, which were audio-taped and transcribed. The rationale for using the phenomenological approach in the qualitative study was to describe in-depth experiences of health care professionals. Moustakas (1994) modified van Kaam method explored the lived experiences and perceptions of 17 doctors and nurses relating to emergency trauma care for critically injured patients. Data analysis revealed important factors that could enhance the quality of prehospital care for civilian casualties of landmine and unexploded ordnance (UXO) blast injuries in Afghanistan. The four major themes that emerged from participants responses to interview questions included communication, formal training for emergency medical personnel, transportation to a higher-level center, and quality of prehospital care.

Completing your Qualitative Dissertation fills an important gap in the qualitative research literature by specifically addressing the fast-growing practice of qualitative postgraduate dissertations in colleges and universities throughout the world. Many students struggle to complete qualitative research projects because the research itself is inherently messy. To address this challenge the authors have distilled decades of experience into a first-of-its-kind, highly practical reference for graduate students. At the heart of the book is a series of chapters that models the typical progression of a dissertation. Each chapter is illustrated by examples that give the reader an understanding of what the actual write-up would look like. Emphasis throughout the book is on conceptual understanding as it relates to the practical aspects involved in navigating the dissertation process.

The First Edition of InterViews has provided students and professionals in a wide variety of disciplines with the ∓whys∓ and ∓hows∓ of research interviewing, preparing students for learning interviewing by doing interviews and by studying examples of best practice. The thoroughly revised Second Edition retains its original seven-stage structure, continuing to focus on the practical, epistemological, and ethical issues involved with interviewing. Authors Steinar Kvale and Svend Brinkmann also include coverage of newer developments in qualitative interviewing, discussion of interviewing as a craft, and a new chapter on linguistic modes of interview analysis. Practical and conceptual assignments, as well as new ∓tool boxes∓ provide students with the means to dig deeper into the material presented and achieve a more meaningful level of understanding. New to This Edition ∓ Includes new developments in qualitative interviewing: New materials cover narrative, discursive, and conversational analyses. ∓ Presents interviewing as a social practice: Knowledge produced by interviewing is discussed as linguistic, conversational, narrative, relational, situated, and pragmatic. ∓ Addresses a variety of interviews forms: In addition to harmonious, empathetic interviews, the authors also cover confrontational interviews. Intended Audience This text is ideal for both novice and experienced interview researchers as well as graduate students taking courses in qualitative and research methods in the social sciences and health sciences, particularly departments of Education, Nursing, Sociology, Psychology, and Communication. Praise for the previous edition: ∓ I think this is one of the most in-depth treatments of the interview process that I have seen. The frank and realistic approach that the authors take to this topic is rather unique and will be very reassuring to researchers who are undertaking an interview study for the first time.∓ ∓Lisa M. Diamond, University of Utah
